

Champaign-Urbana Weather Highlights – August 2008

Jim Angel, state climatologist

Temperatures ranged from a high of 90°F on August 4 to a low of 55°F on August 26. The monthly average maximum temperature was 82.4 °F, 0.8 degrees below normal. The monthly average minimum temperature was 61.7 °F, 1.0 degrees below normal. The monthly average mean temperature was 72.1 °F, 0.9 degrees below normal.

Precipitation for August was 0.78 inches, 3.59 inches below normal and the sixth driest August with records going back to 1889. Despite the dry August, the January-August precipitation was 35.08 inches, 6.27 inches above normal and still the tenth wettest on record since 1889.

Additional Information

Additional information for August can be found at the Illinois Climate Network site that is collocated with our cooperative weather observer site. This automated station collects temperature, wind, soil temperature, evaporation, humidity, and solar radiation data. Usually, these data are posted several days after the end of the month at:

<http://www.sws.uiuc.edu/warm/data/2008/August/Champaign.txt>.

For detailed rainfall reports, check out the new volunteer raingage network in Illinois called the Community Collaborative Rain, Hail and Snow Network (CoCoRaHS) at:

<http://www.cocorahs.com/>.

For more information on the climate of Illinois, visit the web site at:

<http://www.sws.uiuc.edu/atmos/statecli/>.

Starting July 1, 2008, the Illinois State Water Survey transferred from the Illinois Department of Natural Resources to the University of Illinois at Urbana-Champaign. Because of that switch, the style of this report has changed slightly with the highlights and appropriate affiliations on the first page and the weather statistics on the second page.
