

Effects of Future Pumping on Shallow Groundwater Circulation

George S. Roadcap, P.G.
Illinois State Water Survey
Illinois Department of Natural Resources

Shallow Aquifer Model – Toolbox for water supply planning

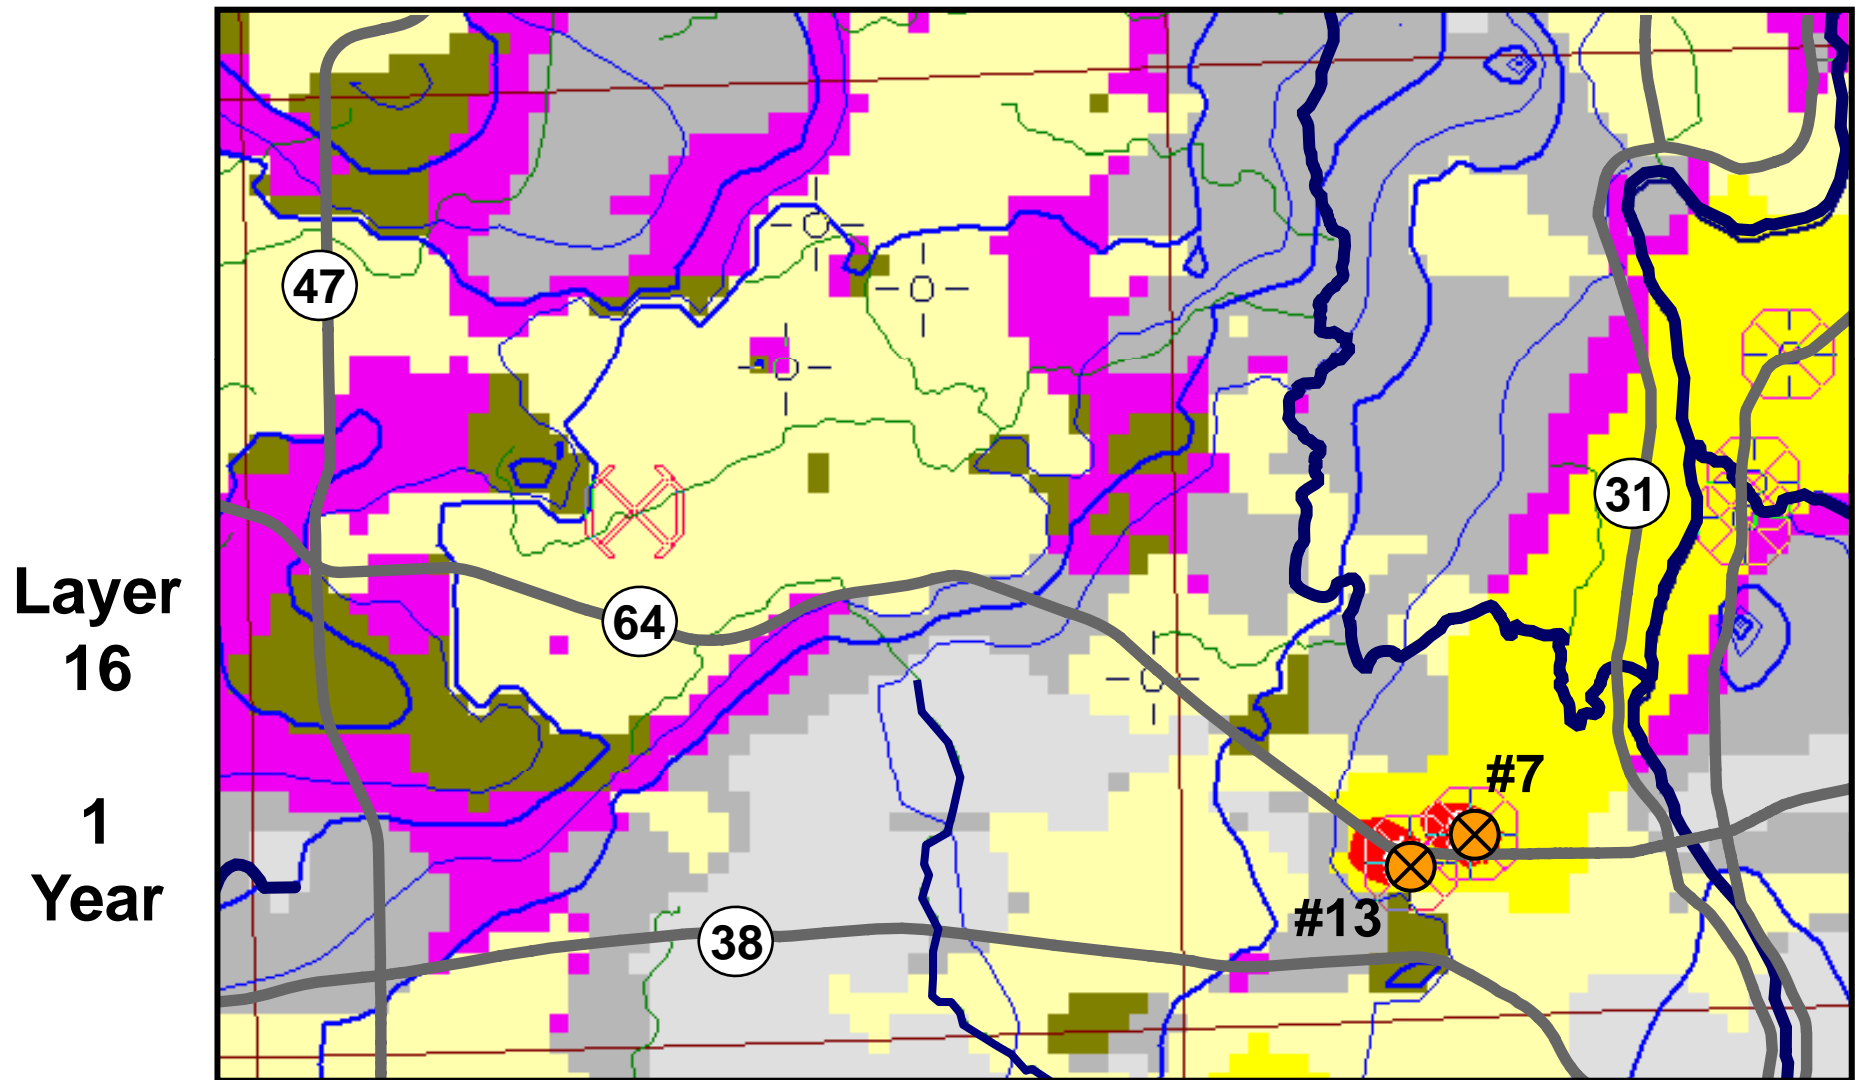

- Predictive scenarios
- Capture zone analysis
- Impact of future water use
- Interaction with streams
- Locating new wellfields

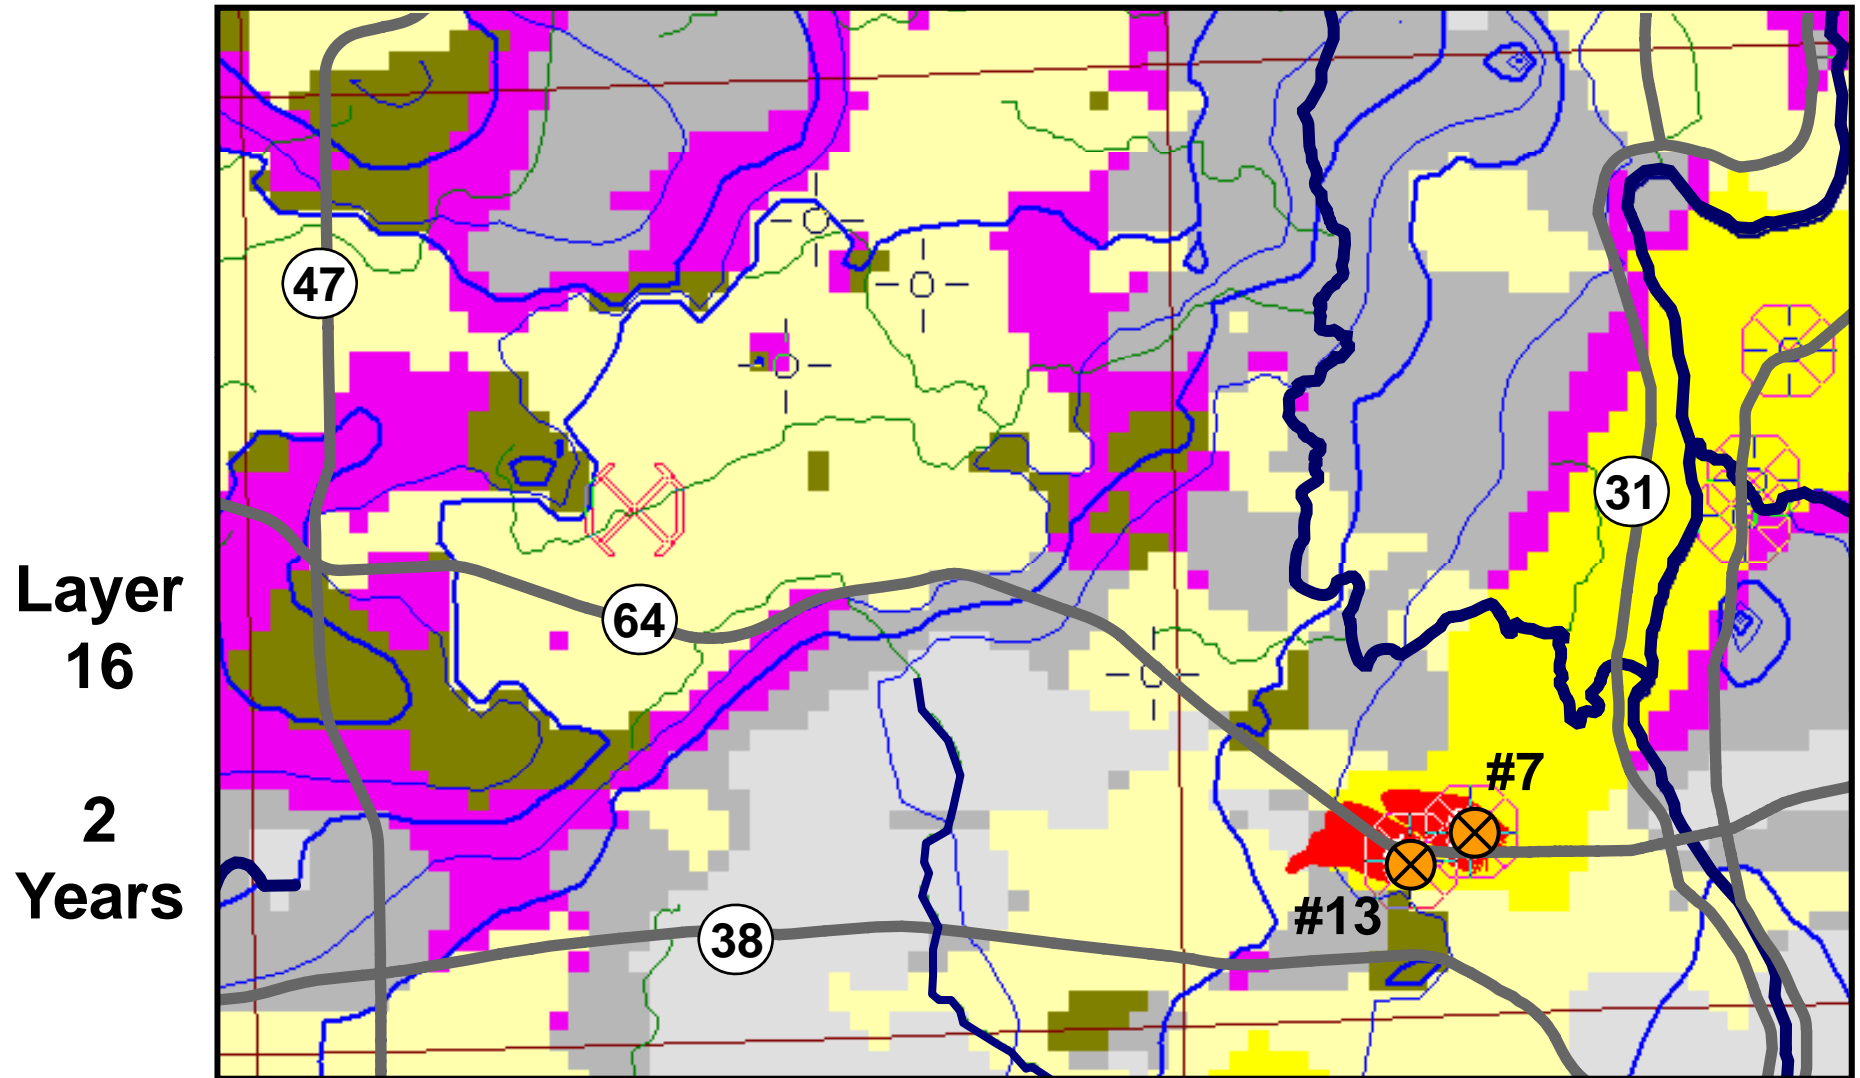

Predictive Scenarios

- Capture Zone Analysis
 - “Zone of Contribution” or “Recharge Area”
 - Track “virtual water particles” backwards through the flow system
 - Example from St Charles #7 and # 13

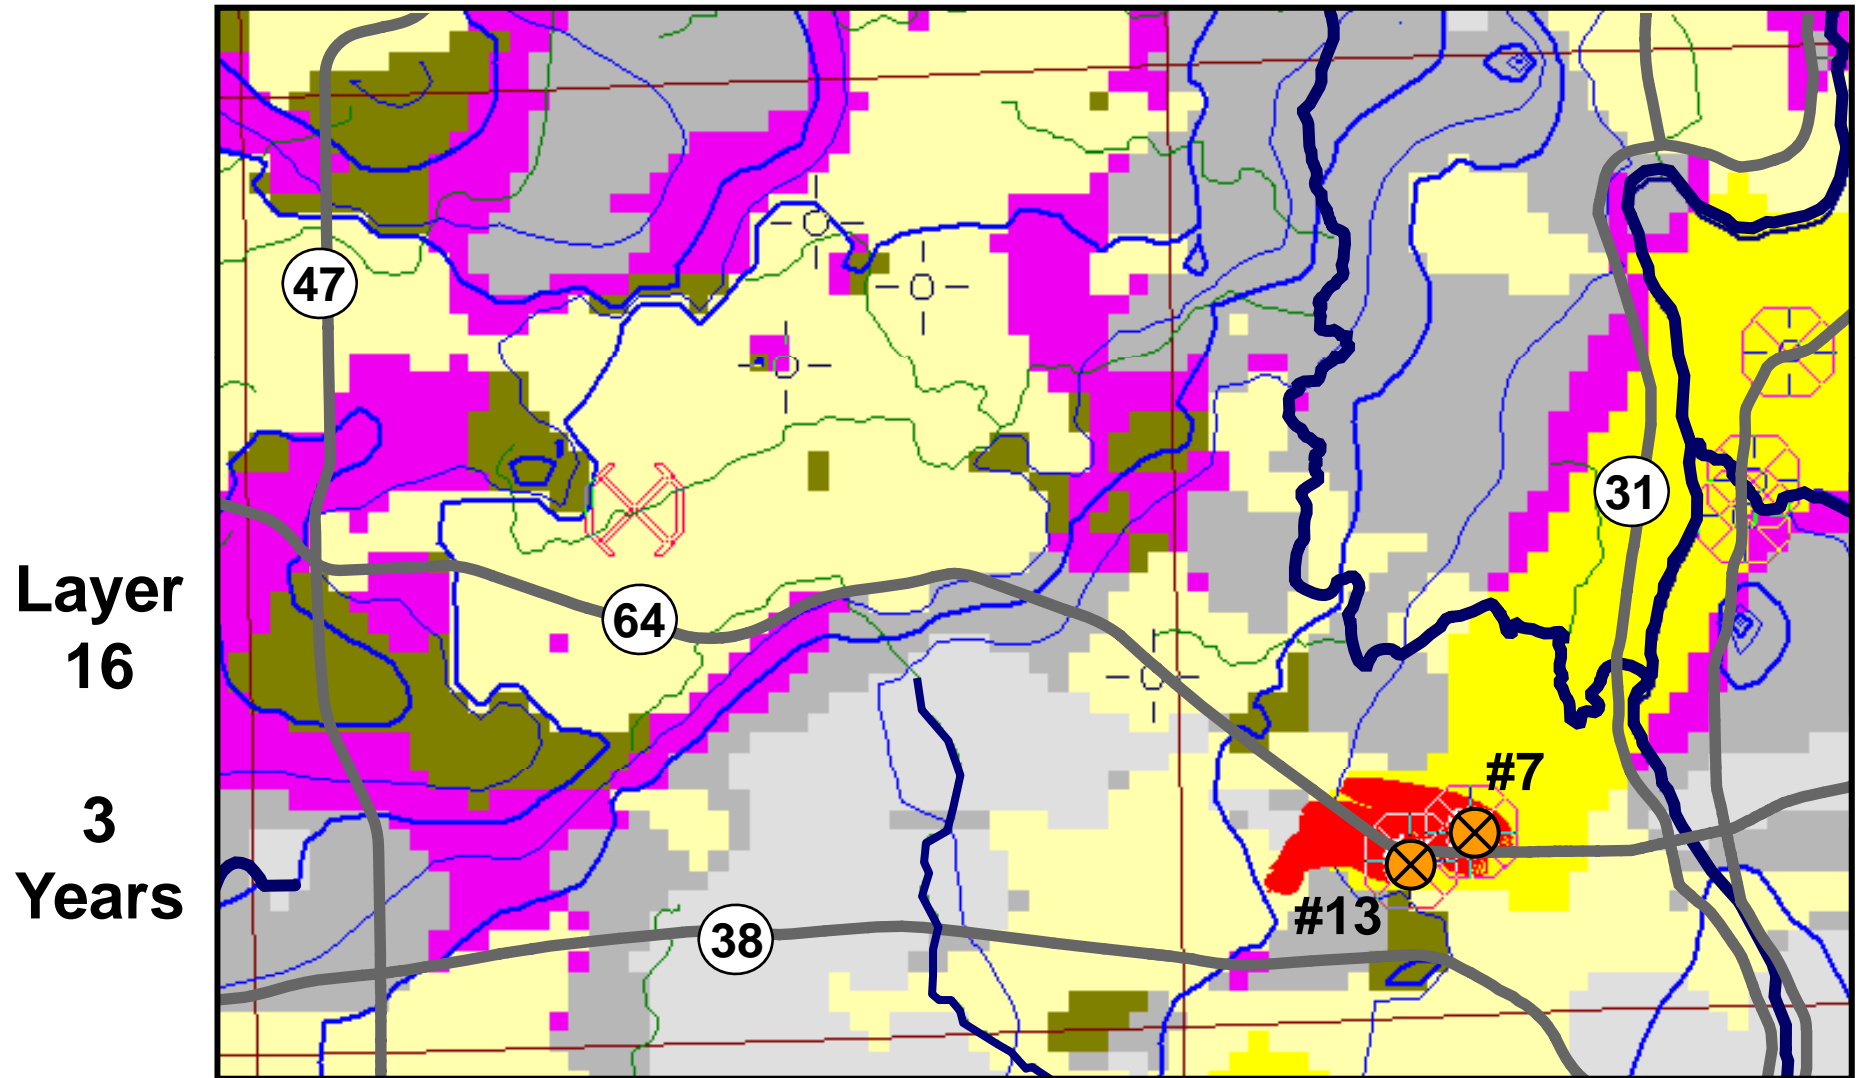

Capture Zone of St Charles #7 and #13

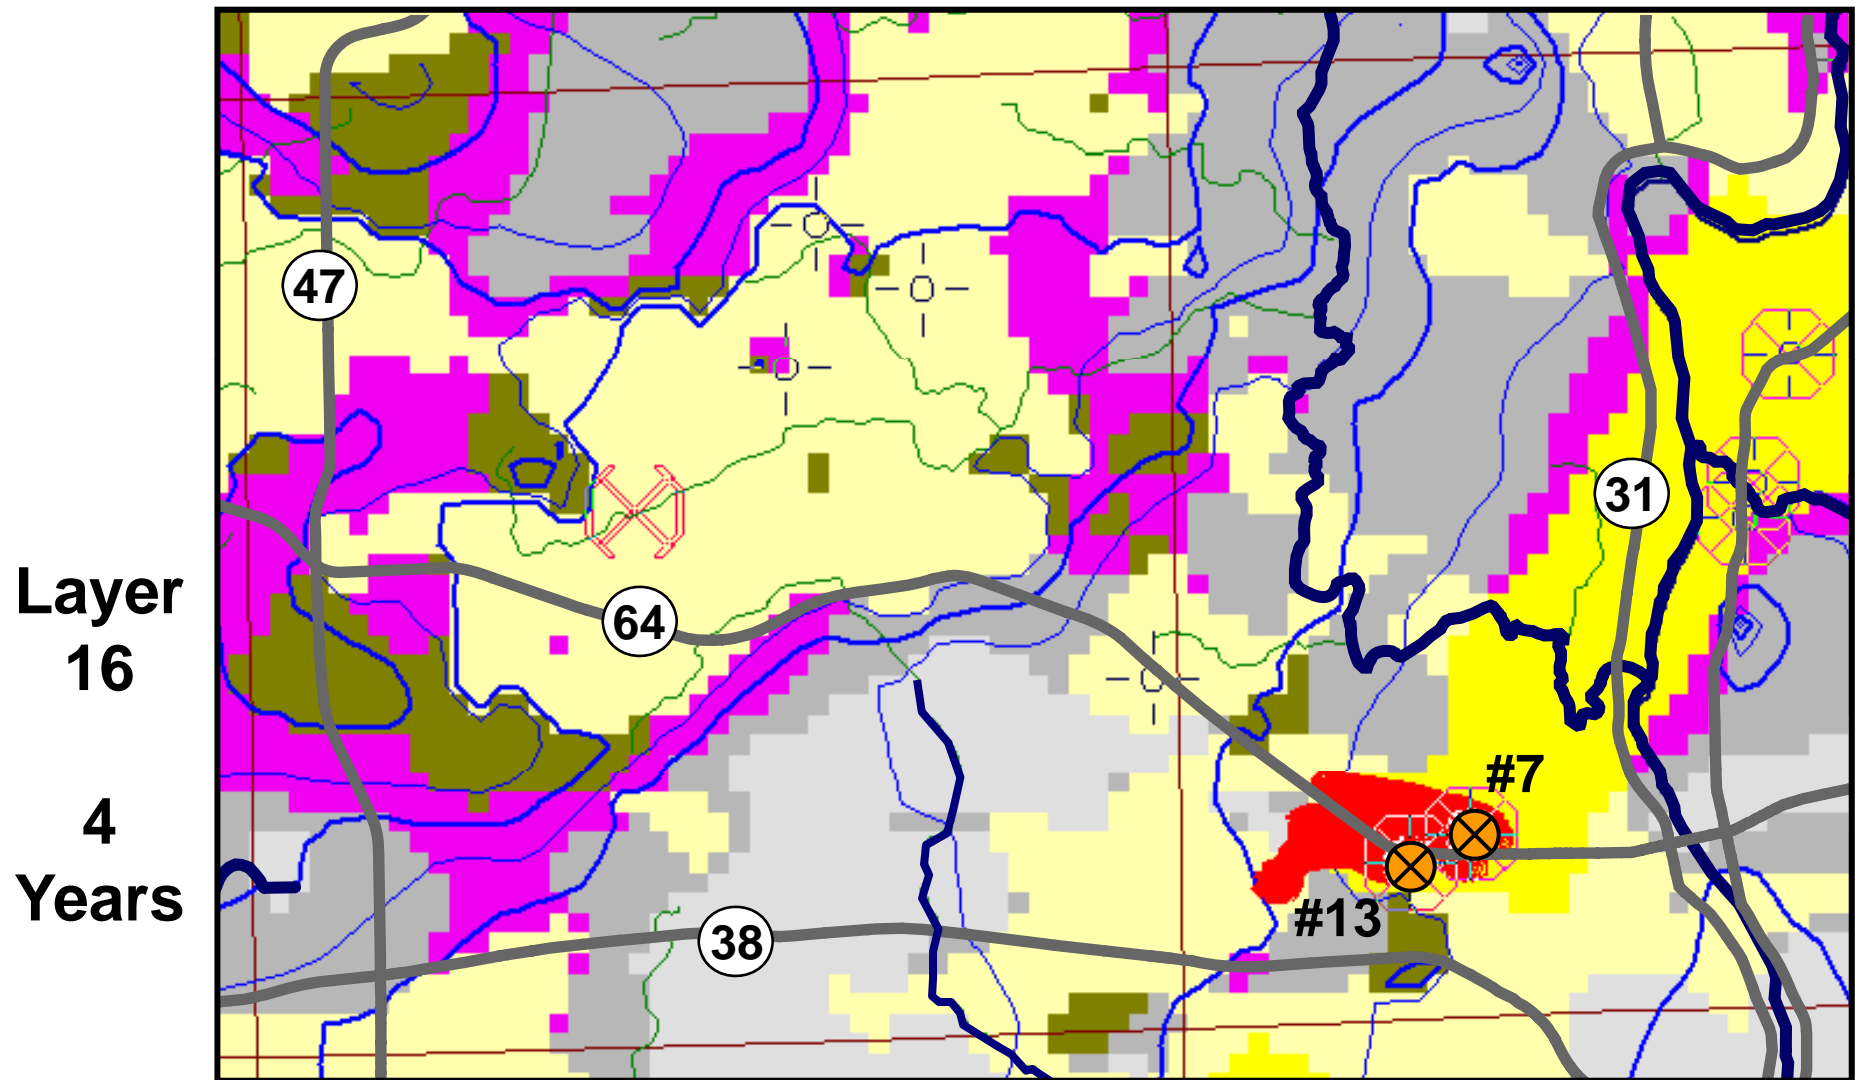

Capture Zone of St Charles #7 and #13

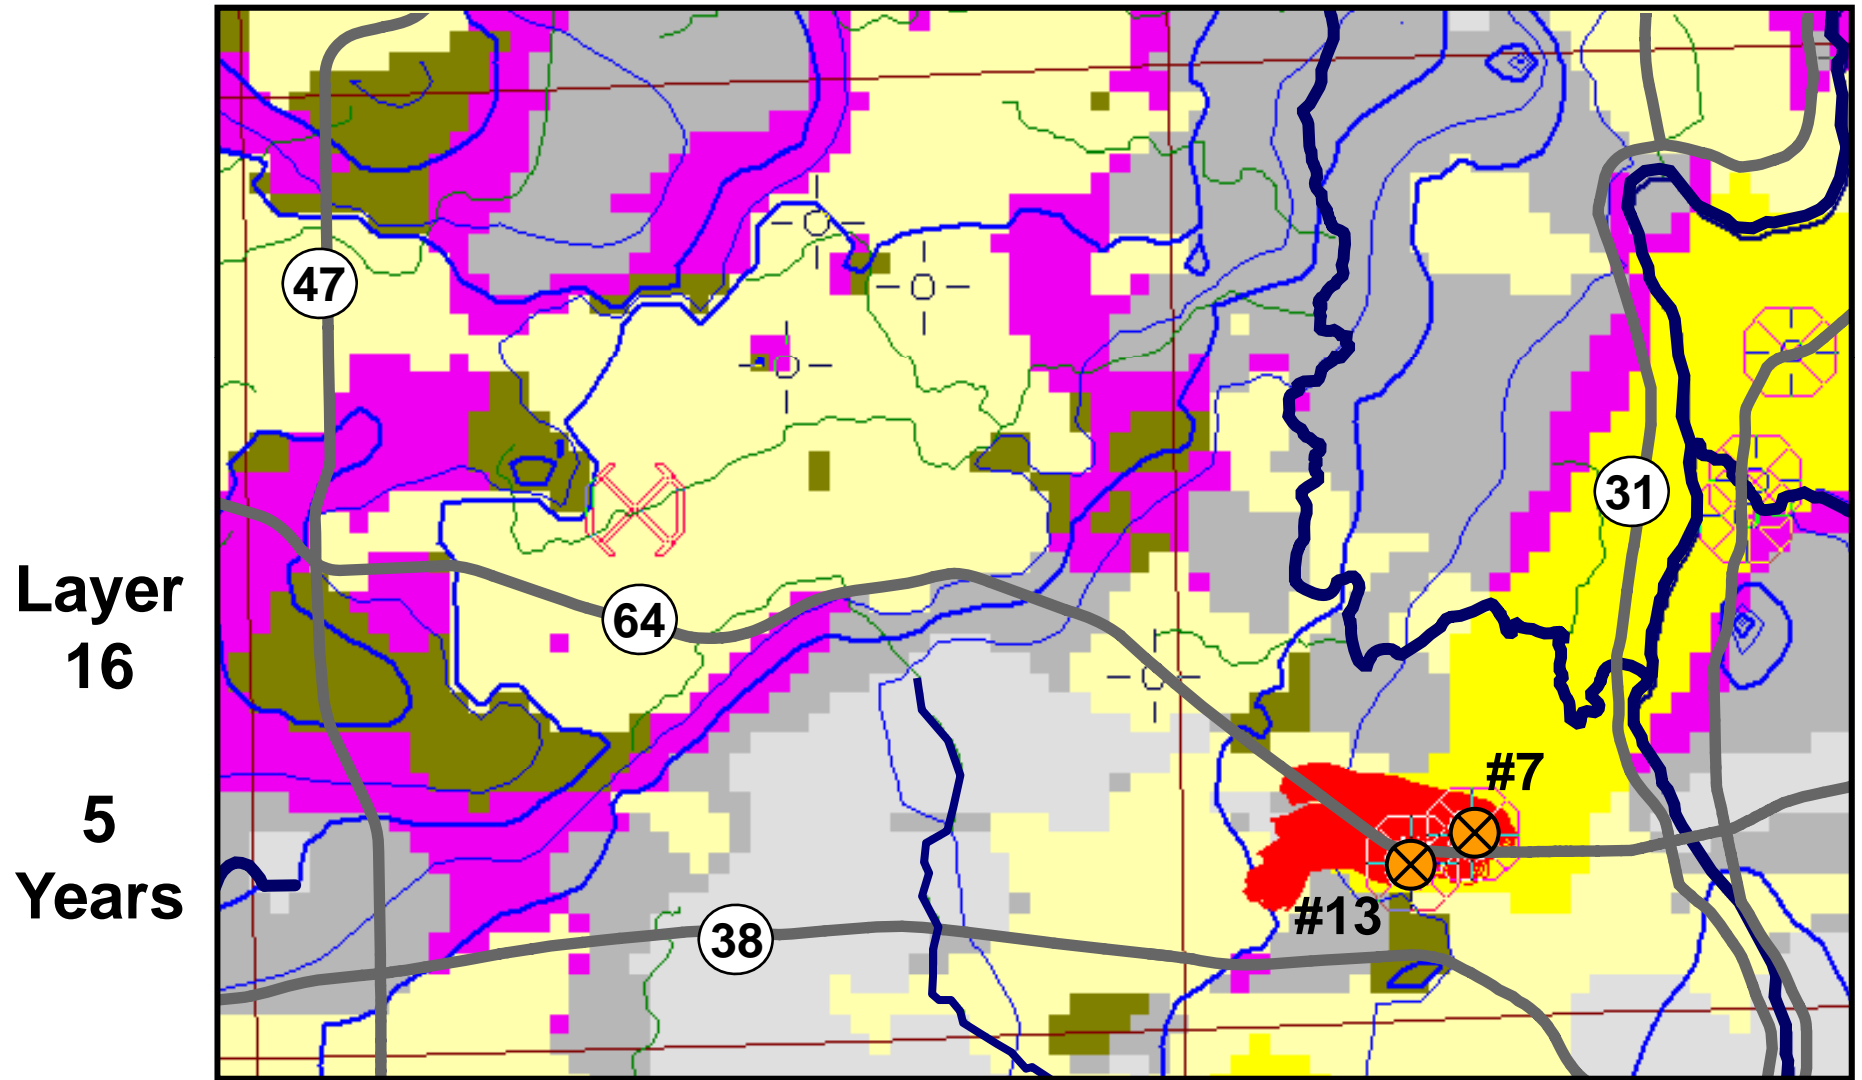

Capture Zone of St Charles #7 and #13

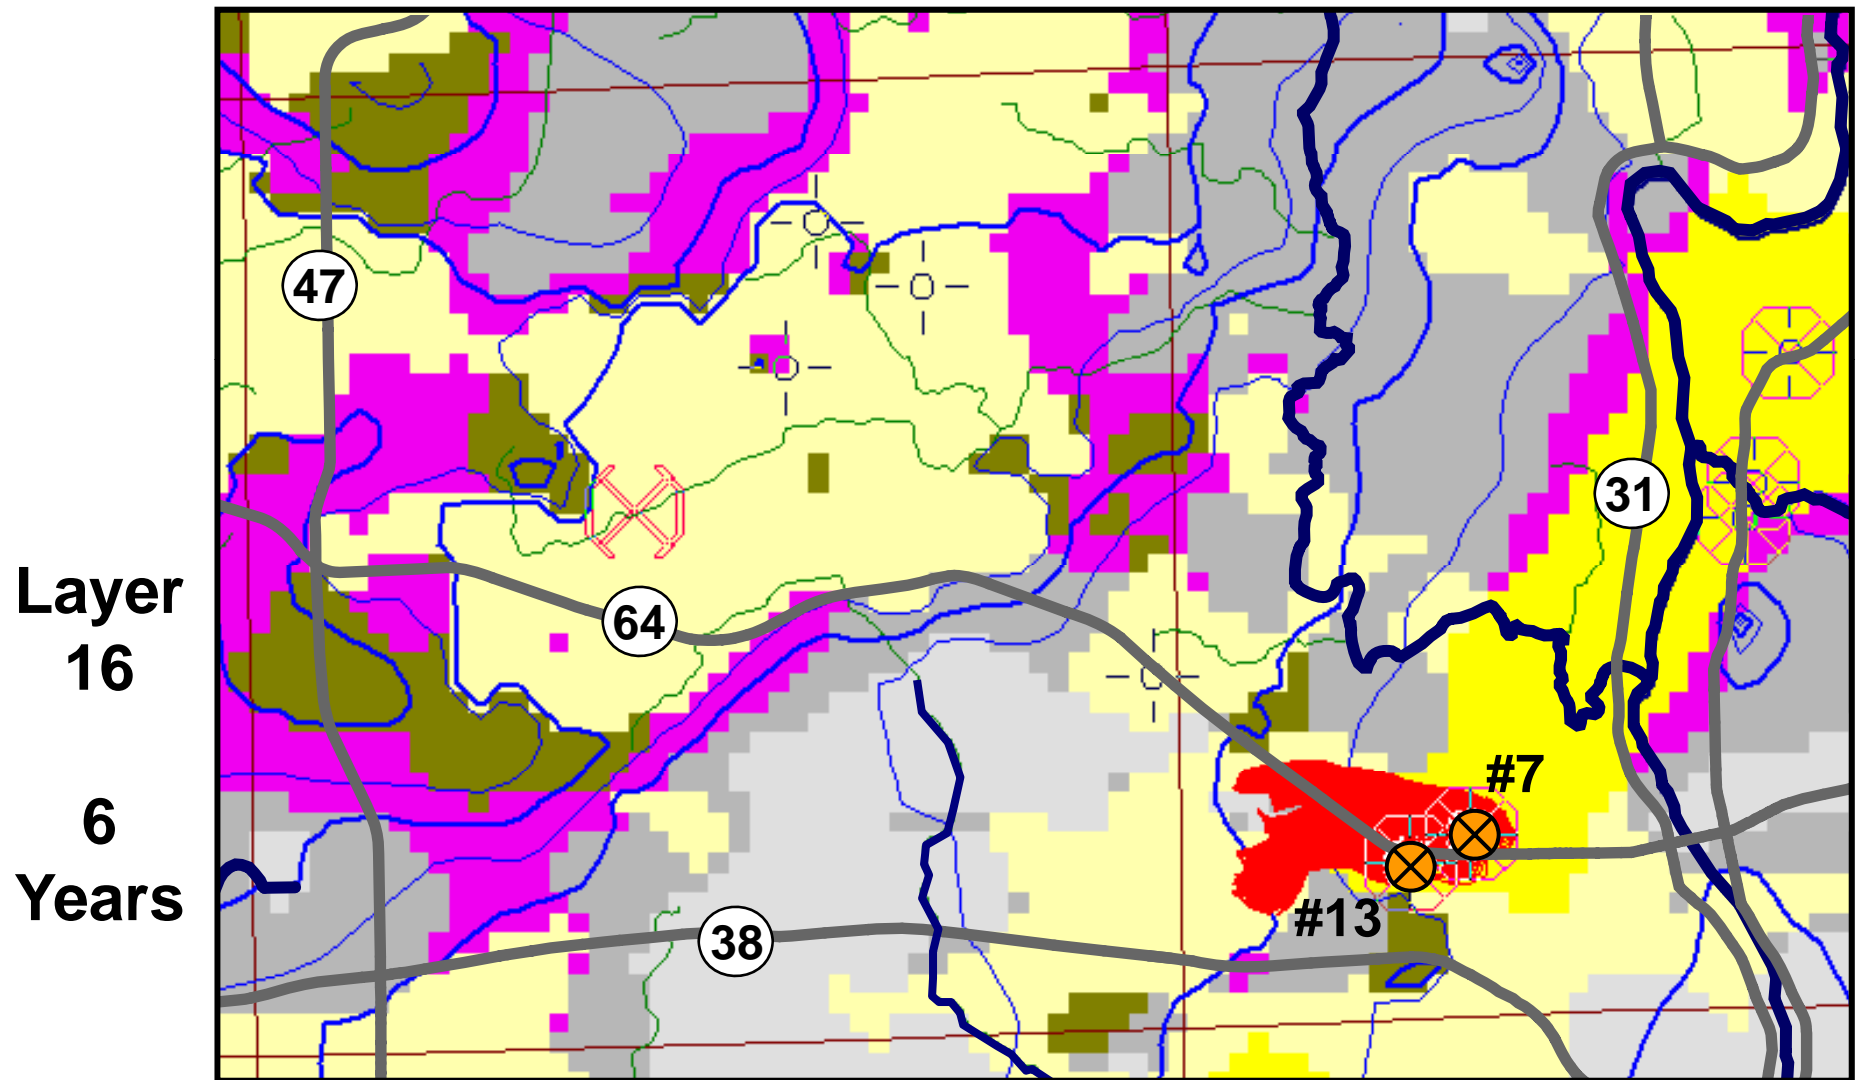

Capture Zone of St Charles #7 and #13

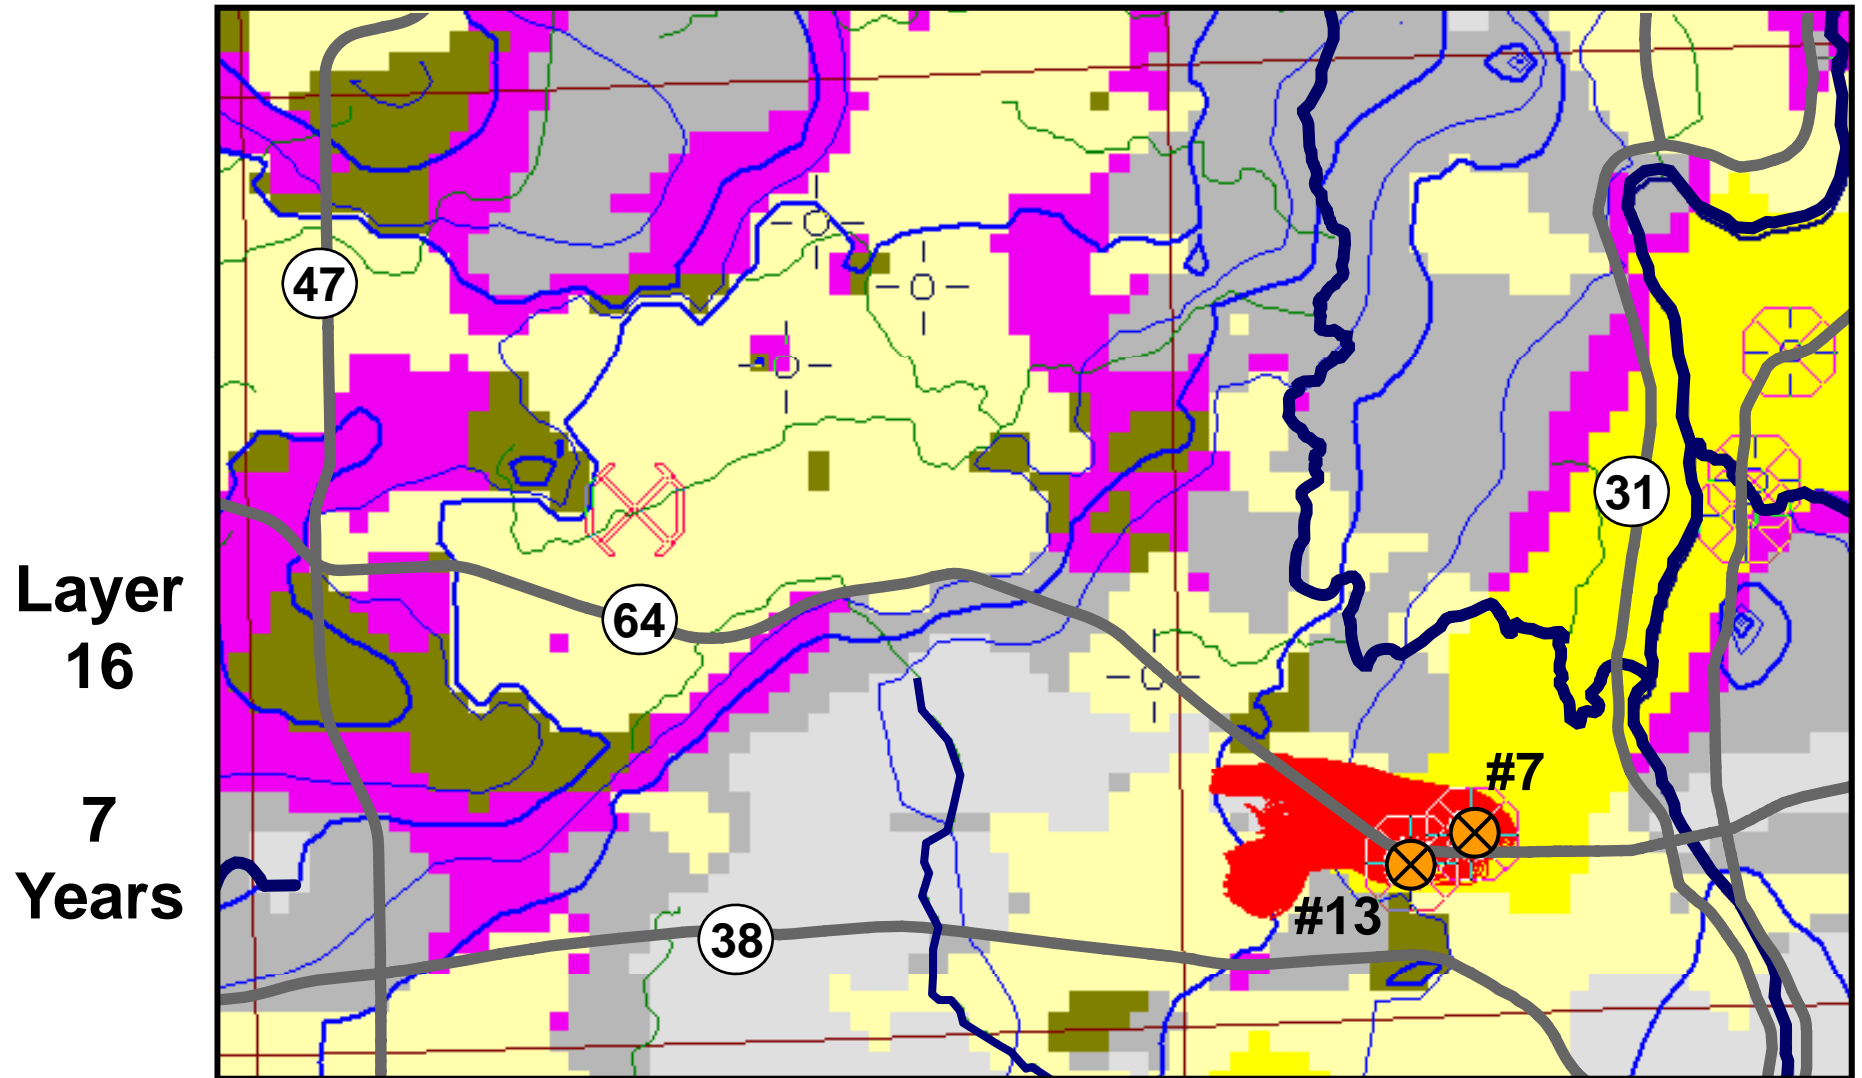

Capture Zone of St Charles #7 and #13

Predictive Scenarios

- Increase pumpage to year 2050
 - Existing wells
- Example from Algonquin #7, #8, and #9
 - Assume no conservation
 - Pumping rate increases by 0.04 MGD per year
 - 2005 - 2.27 MGD
 - 2050 - 4.00 MGD

Drawdown at Algonquin #7, #8, and #9

Drawdown at Algonquin #7, #8, and #9

Year
2010

Pumping
rate (MGD)

#7 – 1.17

#8 – 0.28

#9 – 1.00

Total – 2.45

Minimum color shading: 1 foot

Drawdown at Algonquin #7, #8, and #9

Year
2015

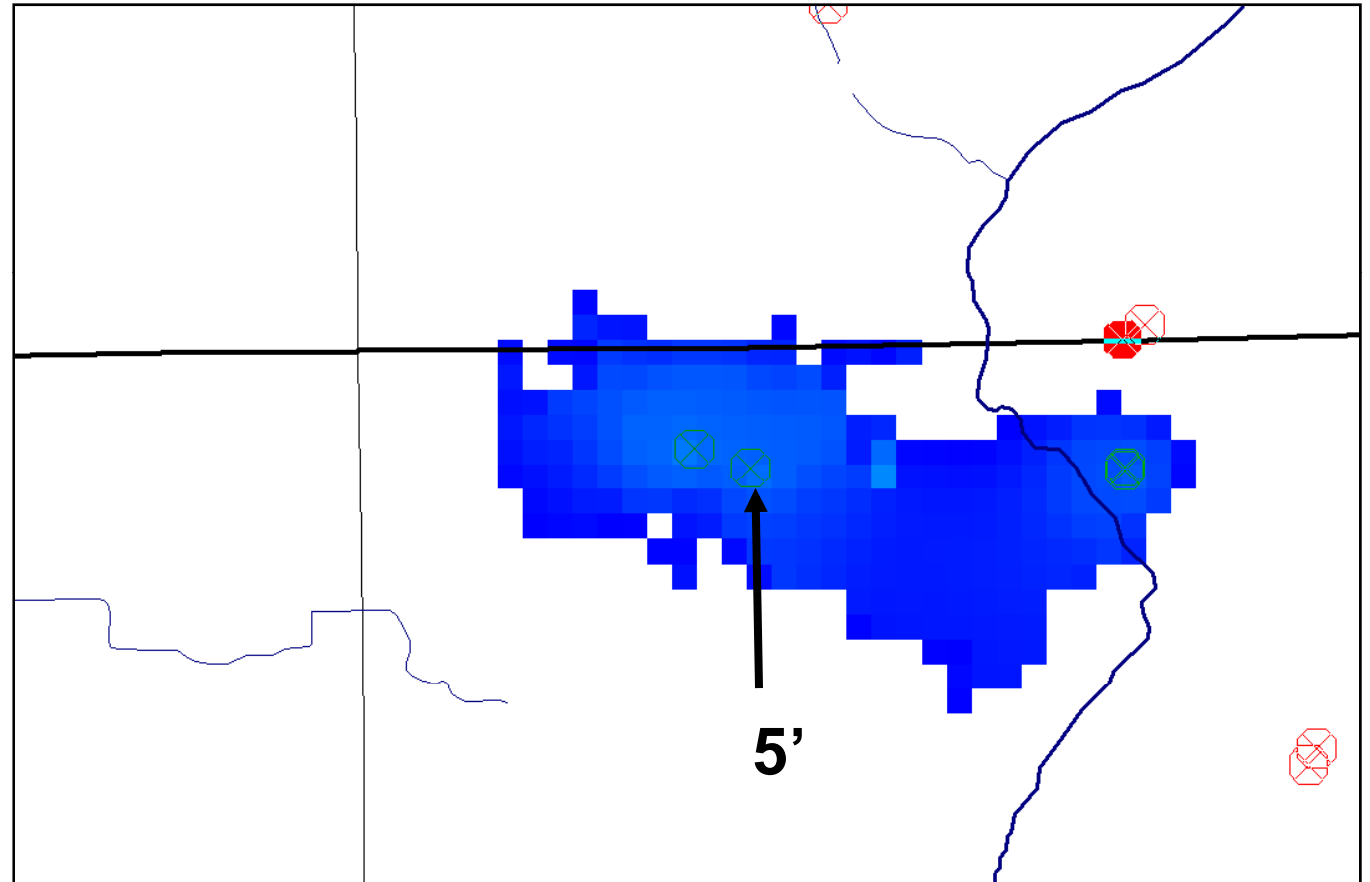

Pumping
rate (MGD)

#7 – 1.26

#8 – 0.30

#9 – 1.09

Total – 2.65

Minimum color shading: 1 foot

Drawdown at Algonquin #7, #8, and #9

Year
2020

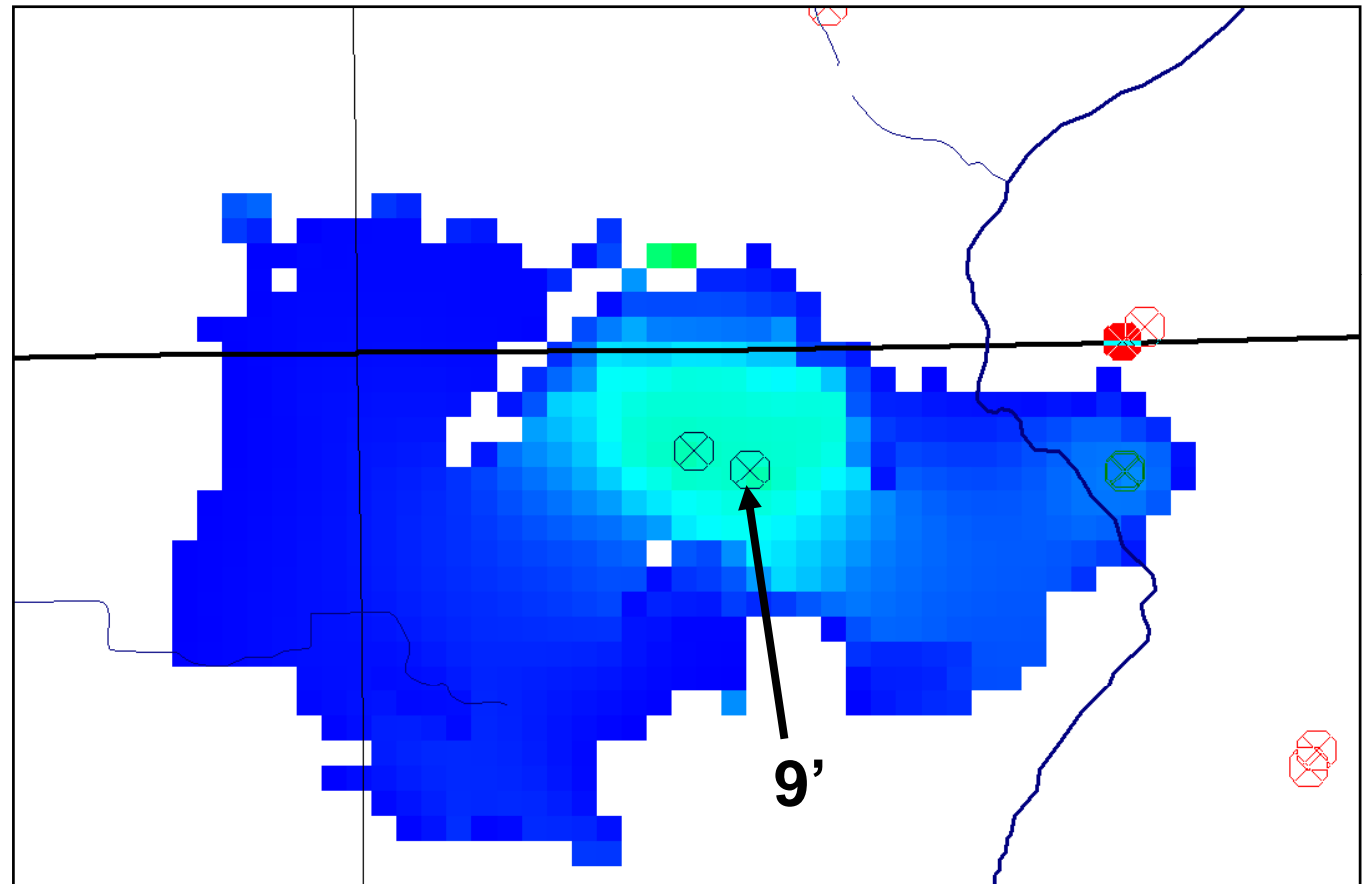

Pumping
rate (MGD)

#7 – 1.35

#8 – 0.32

#9 – 1.16

Total – 2.83

Minimum color shading: 1 foot

Drawdown at Algonquin #7, #8, and #9

Year
2025

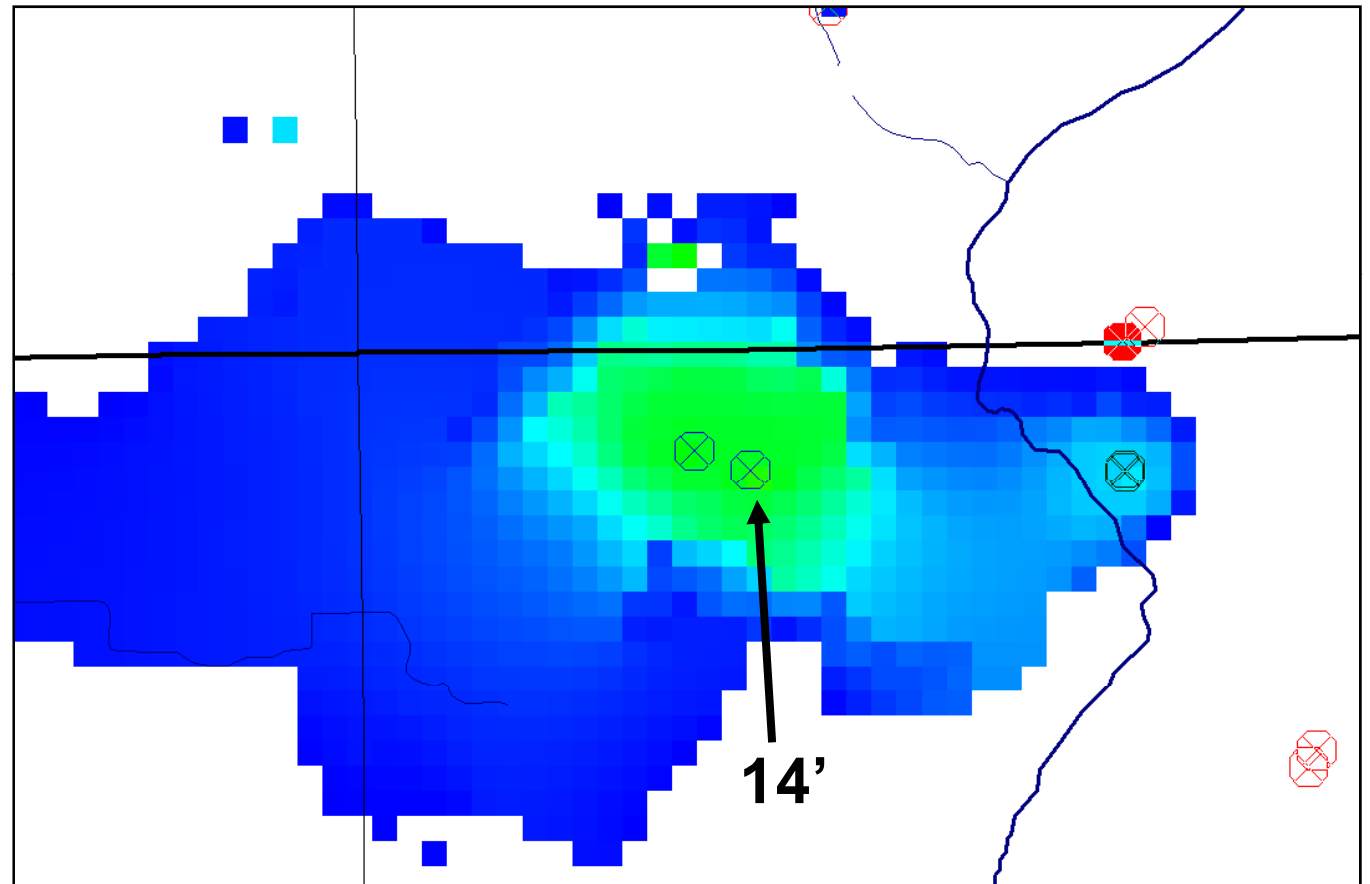

Pumping
rate (MGD)

#7 – 1.44

#8 – 0.34

#9 – 1.24

Total – 3.02

Minimum color shading: 1 foot

Drawdown at Algonquin #7, #8, and #9

Year
2030

Pumping
rate (MGD)

#7 – 1.53

#8 – 0.36

#9 – 1.32

Total – 3.21

Drawdown at Algonquin #7, #8, and #9

Year
2035

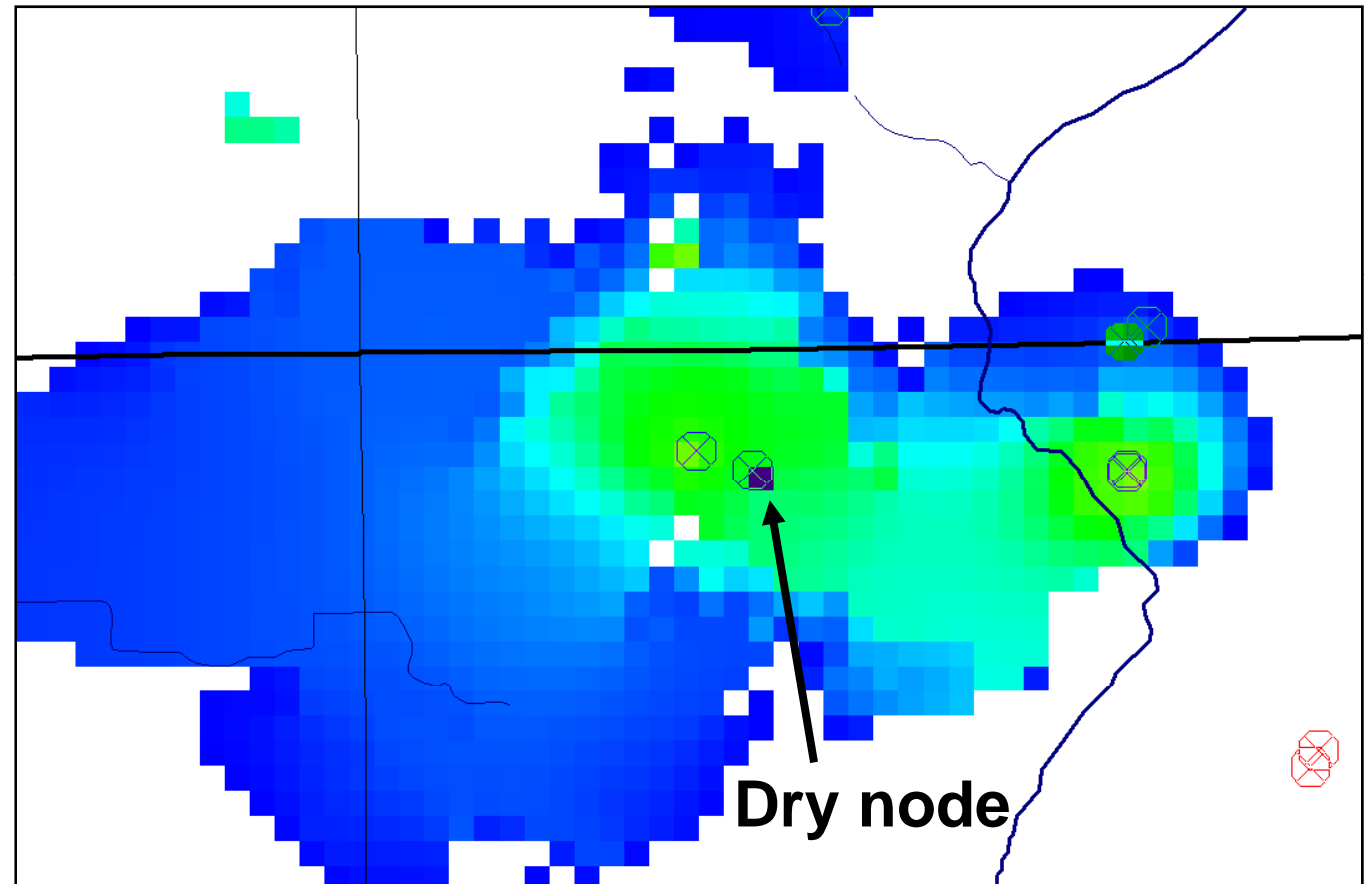

Pumping
rate (MGD)

#7 – 1.63

#8 – Dry

#9 – 1.40

Total – 3.03

Minimum color shading: 1 foot

Drawdown at Algonquin #7, #8, and #9

Year
2040

Pumping
rate (MGD)

#7 – 1.72

#8 – Dry

#9 – 1.48

Total – 3.20

Minimum color shading: 1 foot

Drawdown at Algonquin #7, #8, and #9

Year
2045

Pumping
rate (MGD)

#7 – 1.81

#8 – Dry

#9 – 1.56

Total – 3.37

Minimum color shading: 1 foot

Drawdown at Algonquin #7, #8, and #9

Year
2045

Discharge to
Fox River
decreased by
0.66 MGD

60% of 1.10
MGD increase
in pumpage

Minimum color shading: 1 foot

Drawdown at 2050

- Shallow Bedrock
Aquifer

Minimum color shading: 1 foot
Contour interval: 5 feet

Drawdown at 2050

- Batestown Outwash Aquifer (above Tiskilwa Till)

Minimum color shading: 1 foot
Contour interval: 5 feet

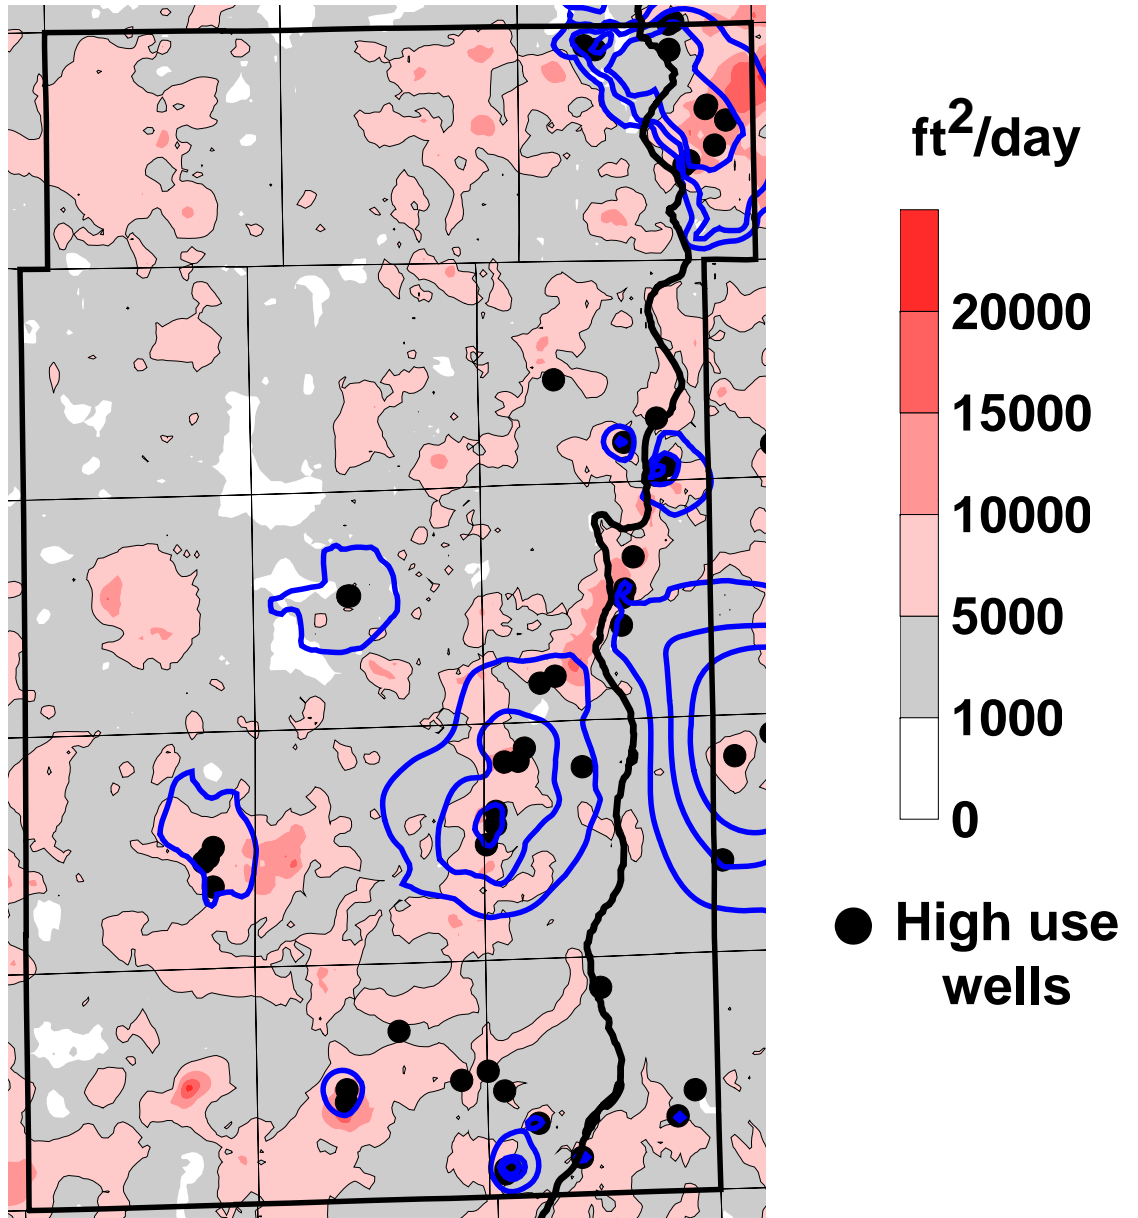

Where can new wellfields be located?

- **Transmissivity (thickness x permeability)**

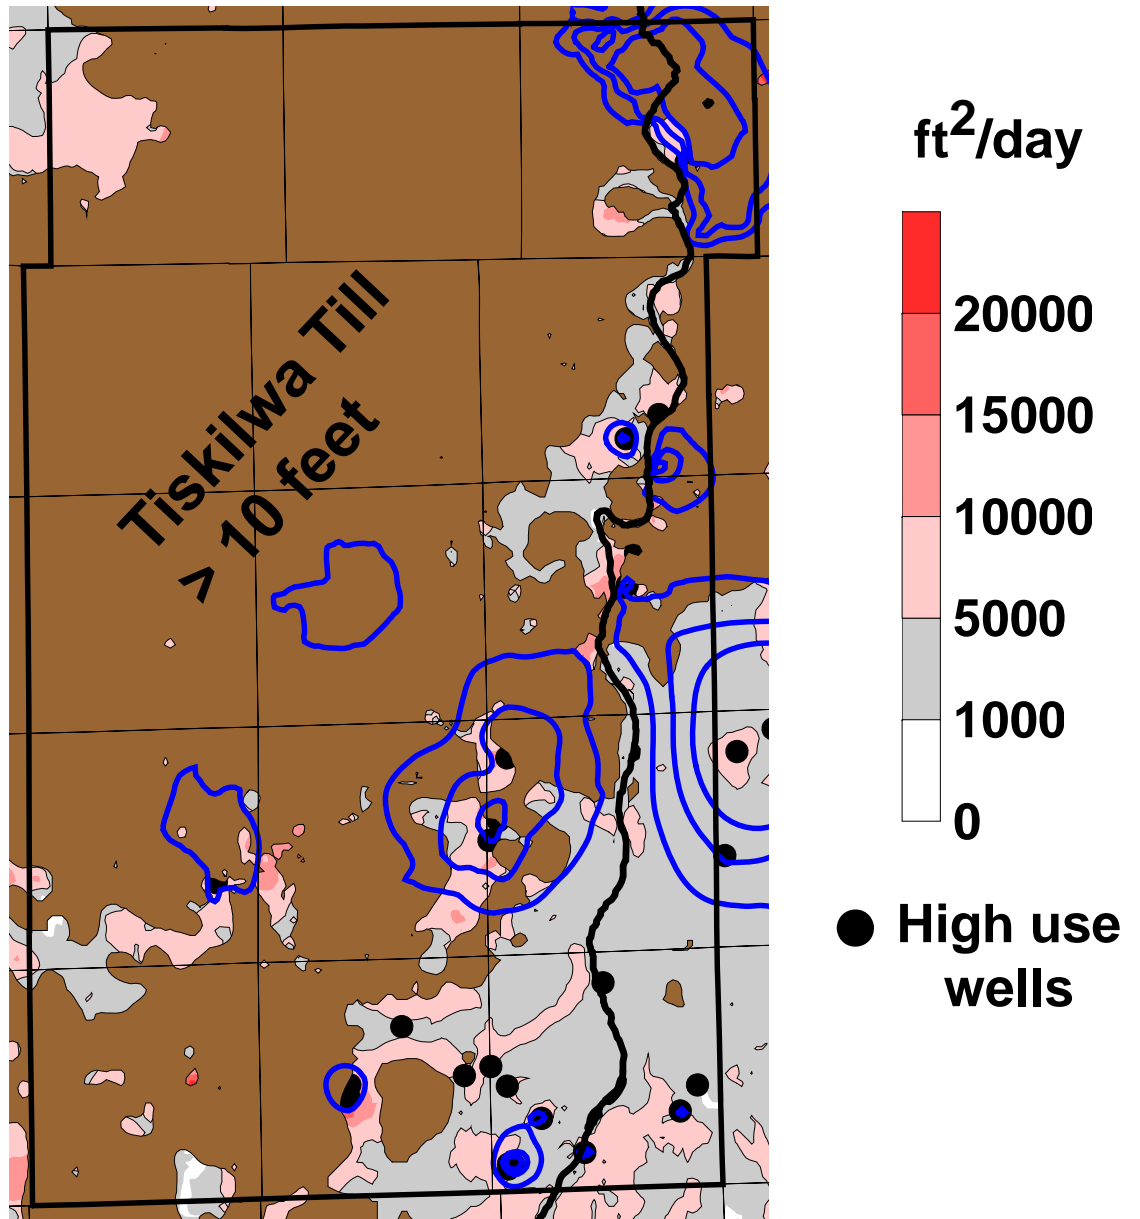

Where can new wellfields be located?

- Transmissivity (thickness x permeability)
- Drawdown (> 5 feet)

Where can new wellfields be located?

- Transmissivity (thickness x permeability)
- Drawdown
- Tiskilwa till aquitard

Summary – Shallow Aquifer Model

- Toolbox for water supply planning
- Results of future use scenarios dependant on local geology and hydrology
 - Connection and flow in streams
 - Presence of the Tiskilwa Till
 - Aquifer properties
- Development of new large wellfields
 - Many of the prime locations are currently used
 - Impacts to existing users
 - Impact to low flows in streams
