

Impact of Future Water Demand on the Mahomet Aquifer

Preliminary Summary of Groundwater Flow Modeling Results

Model Calibration: Observed vs Simulated Heads

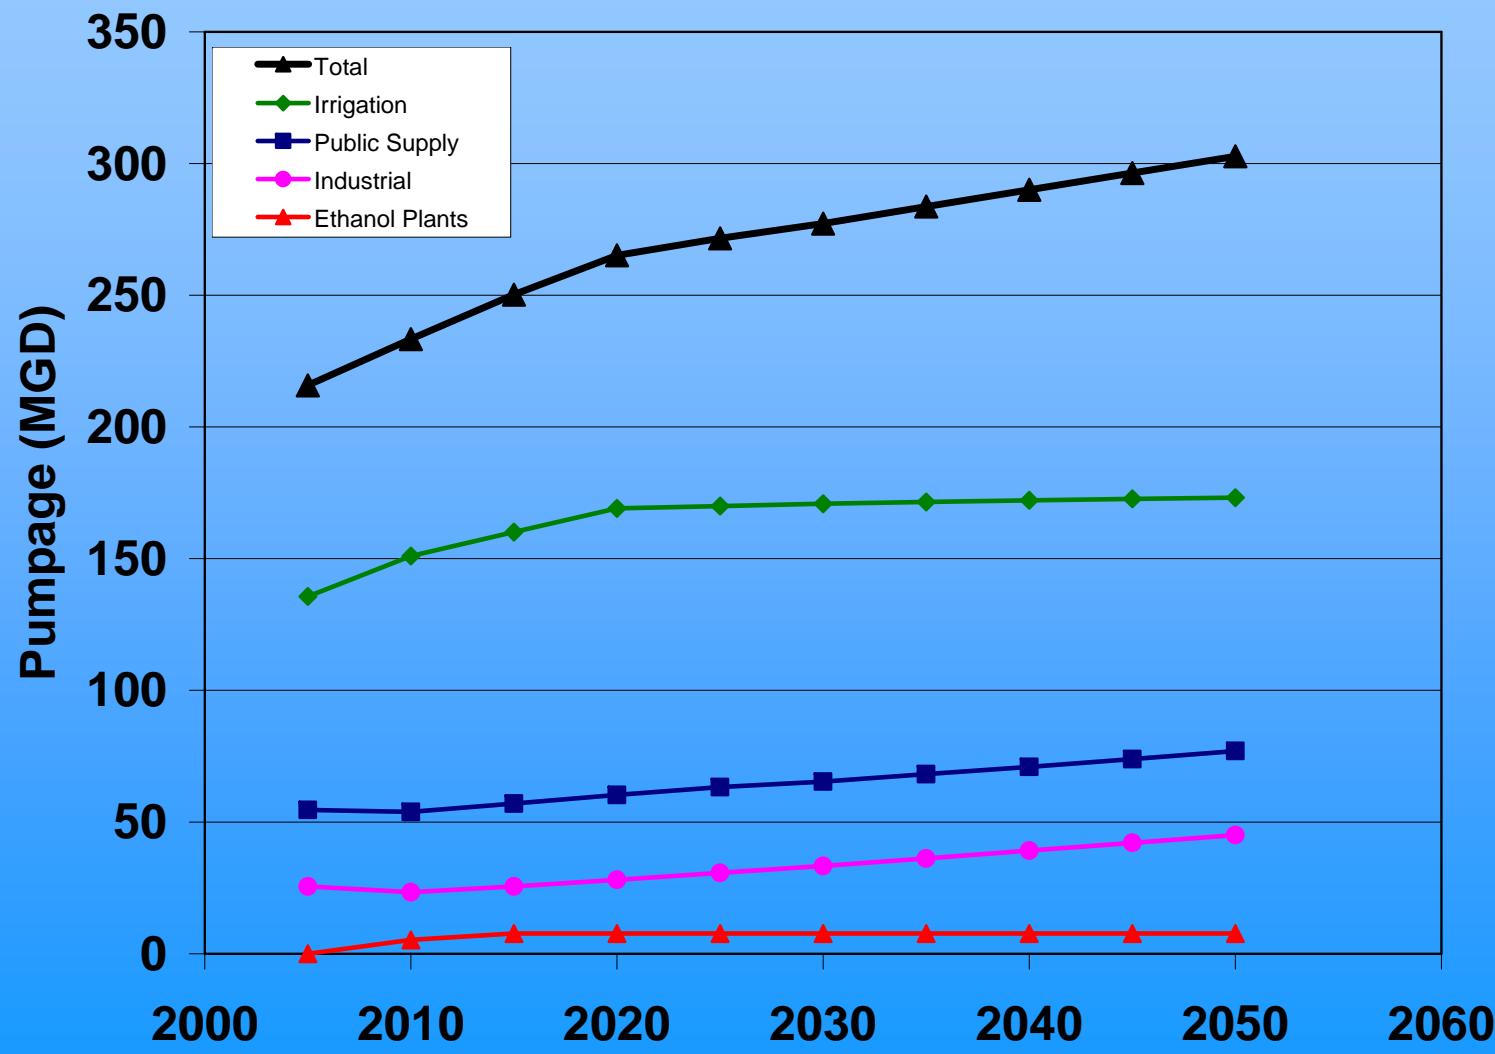

Baseflow and Model Discharges to Target Watersheds

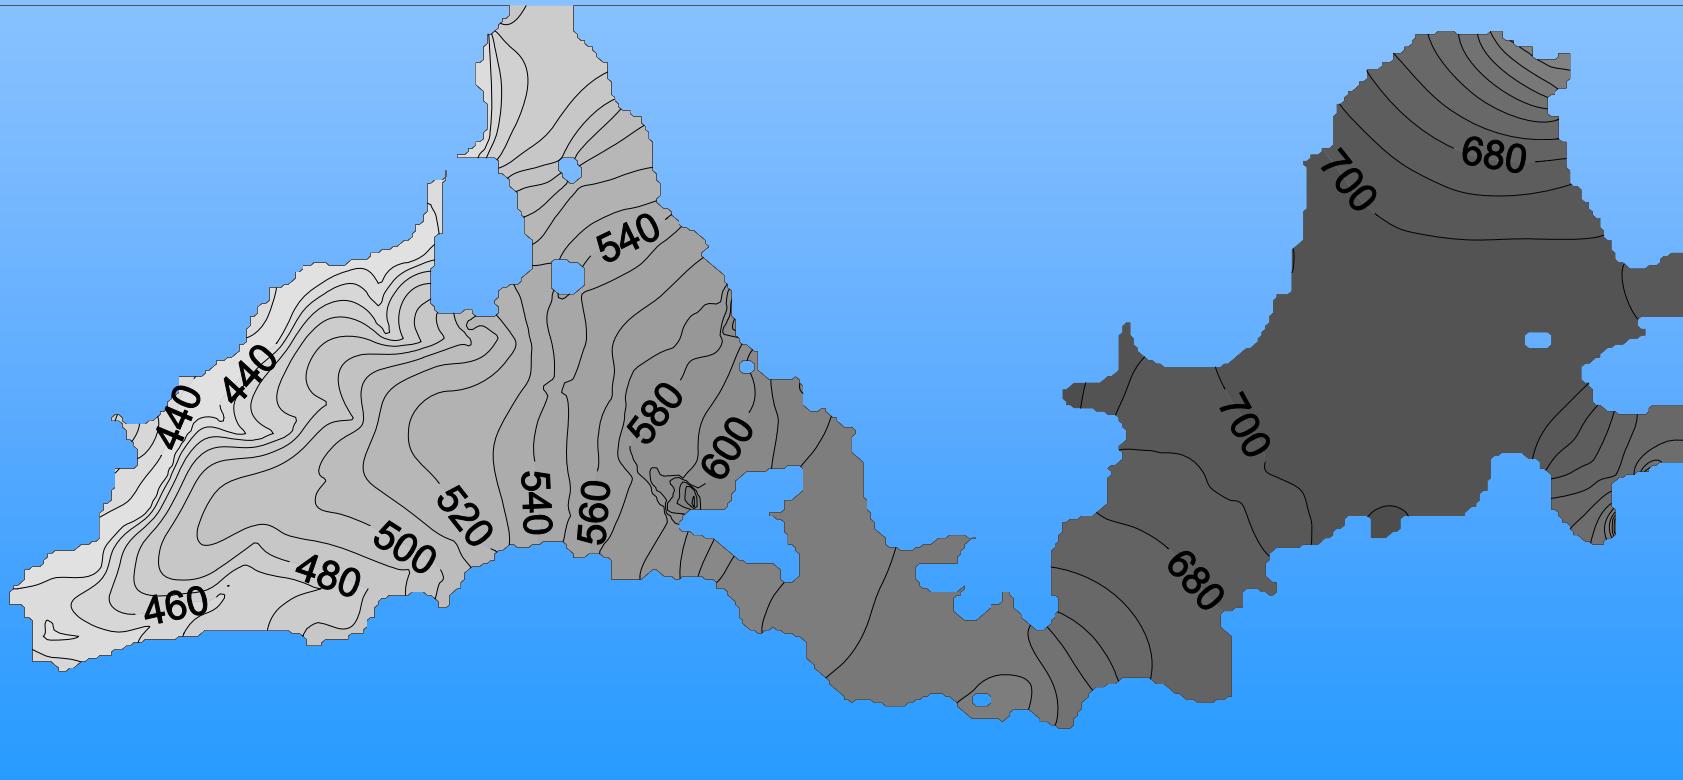

Distribution of Wells in Flow Model

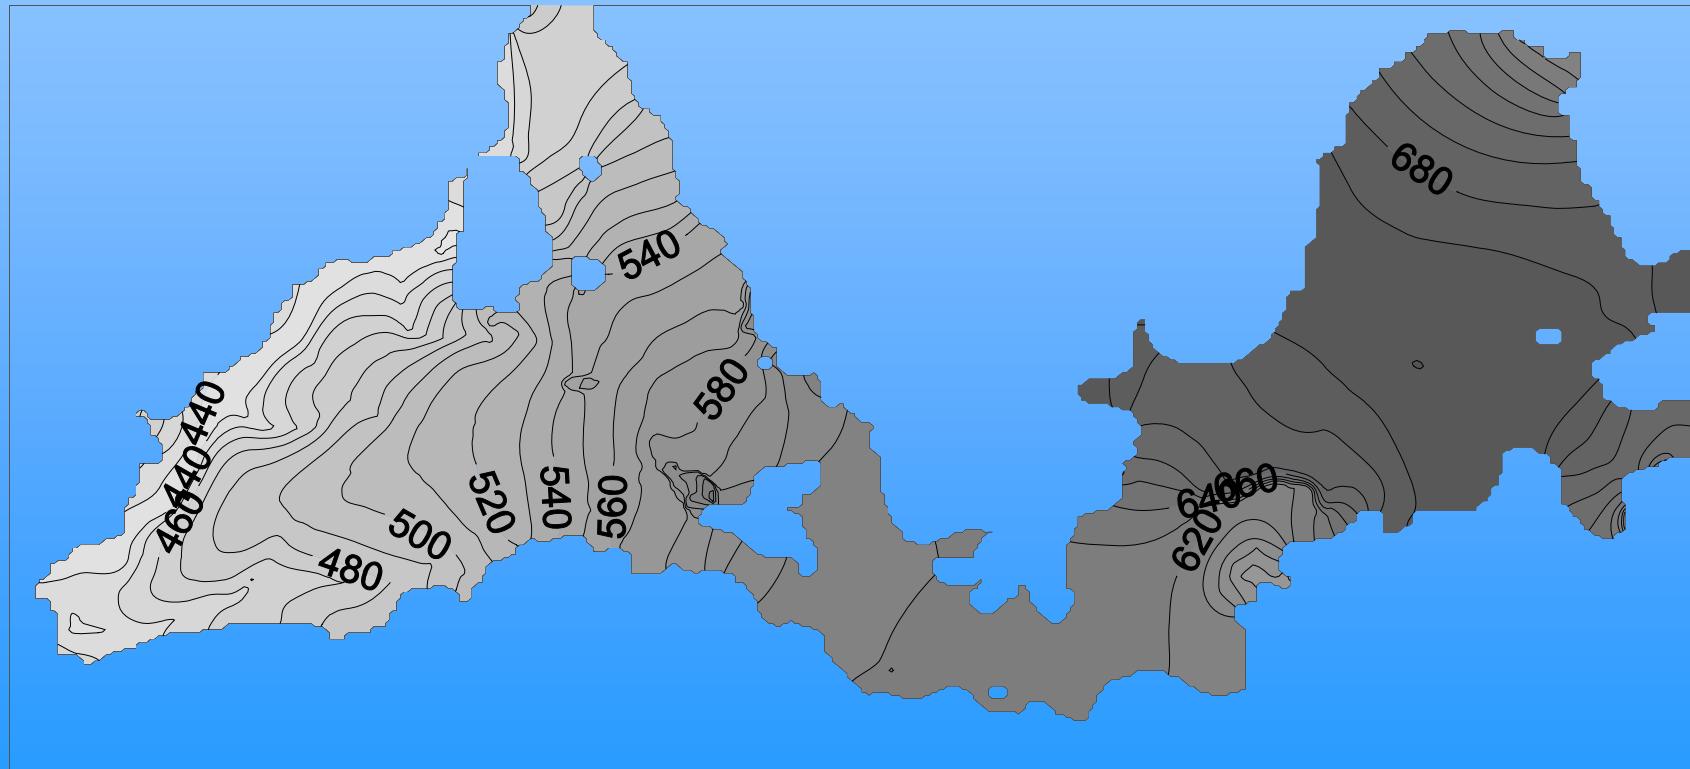

Simulated Baseline Scenario Sector Demand

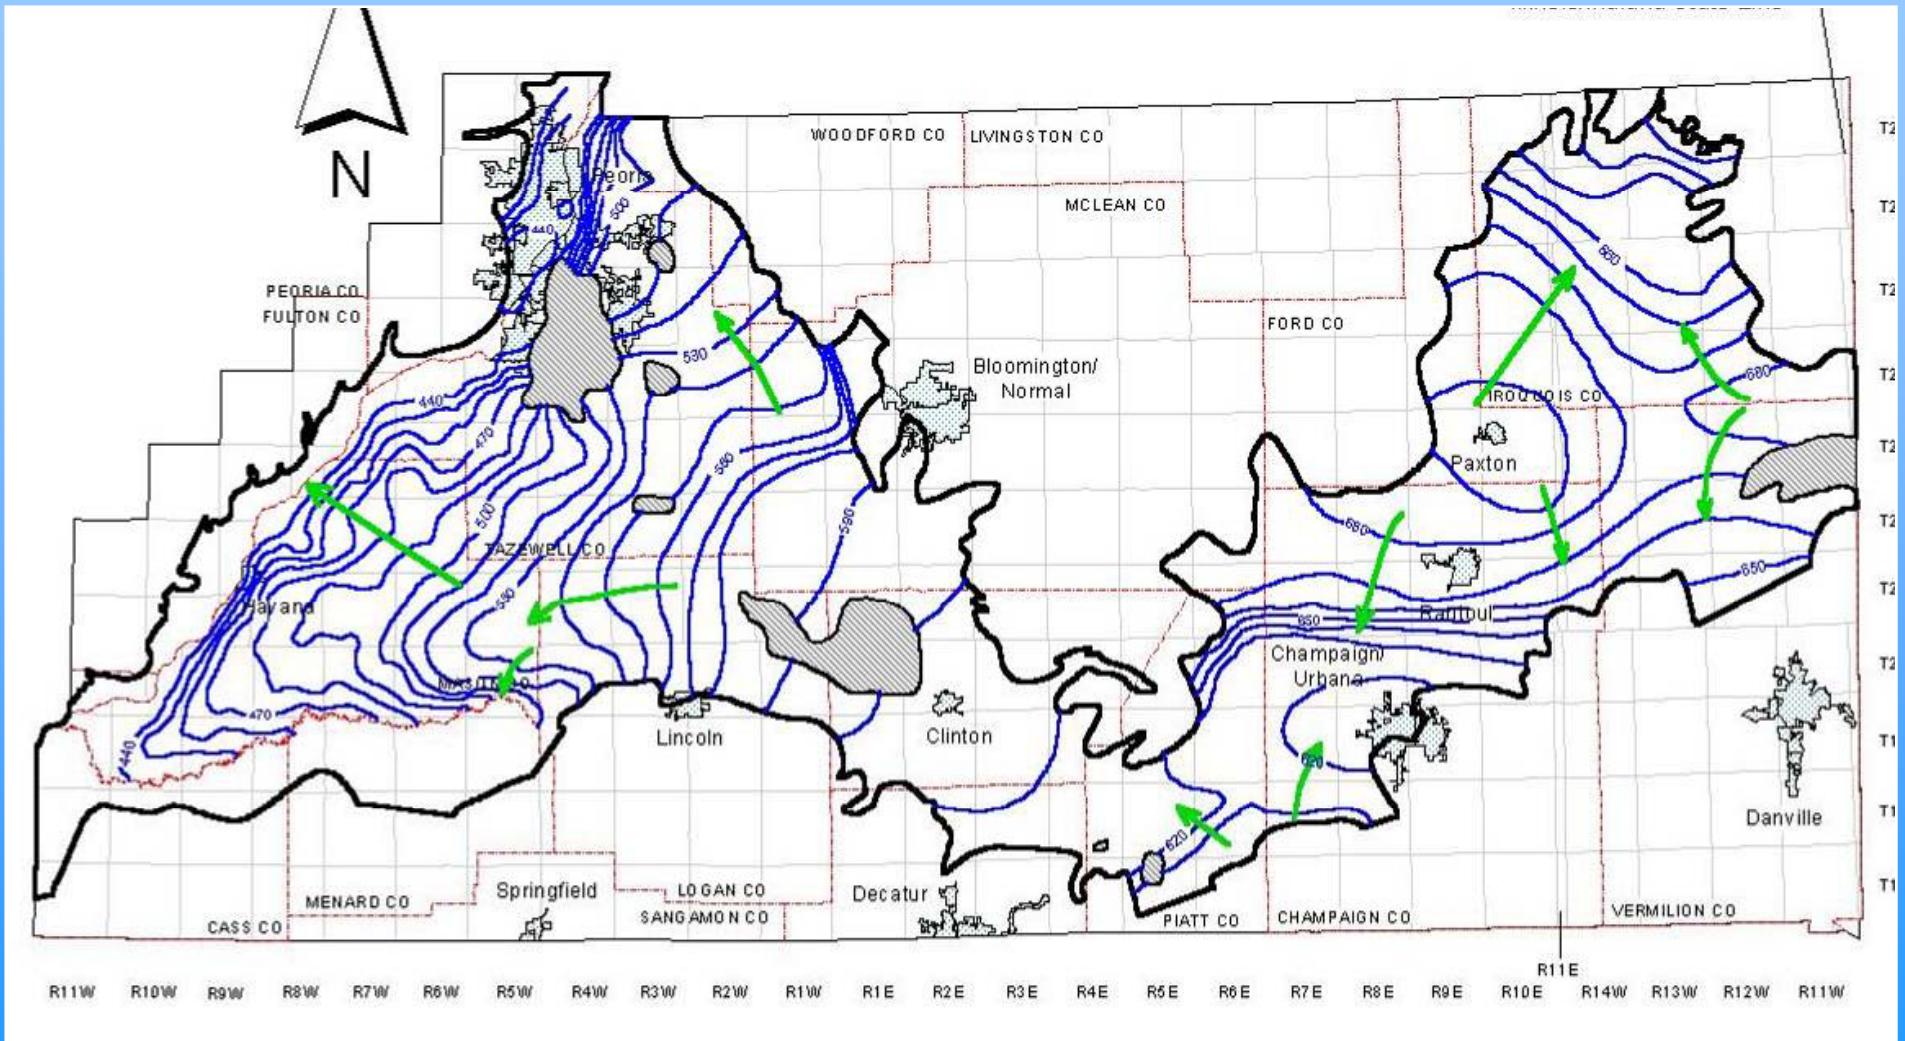

Model Calculated Pre-Development Head Surface

Simulated 2005 Head Surface

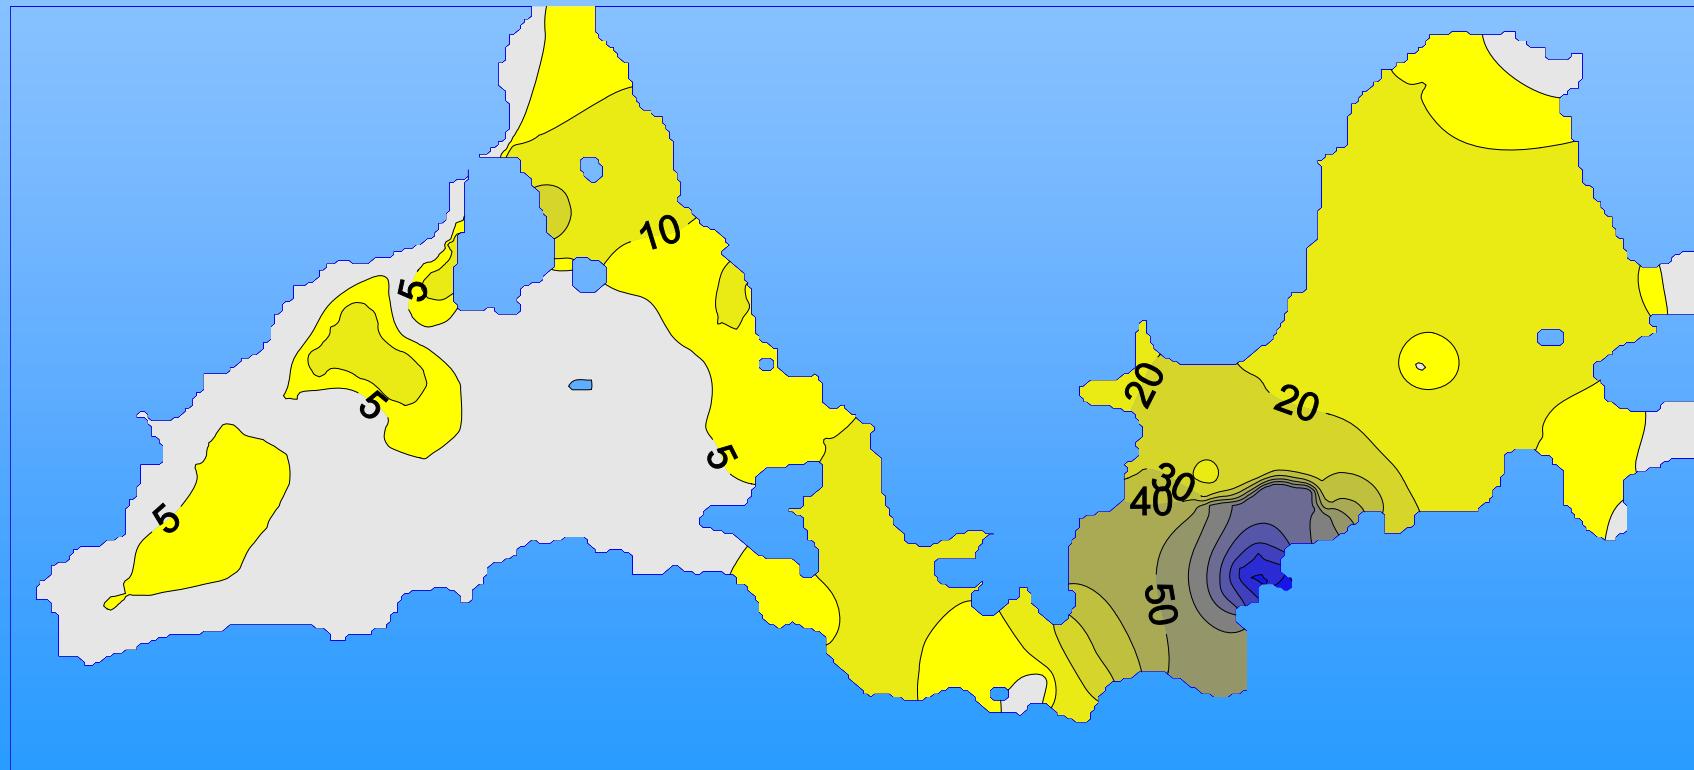

Composite Head Map – Observed Heads

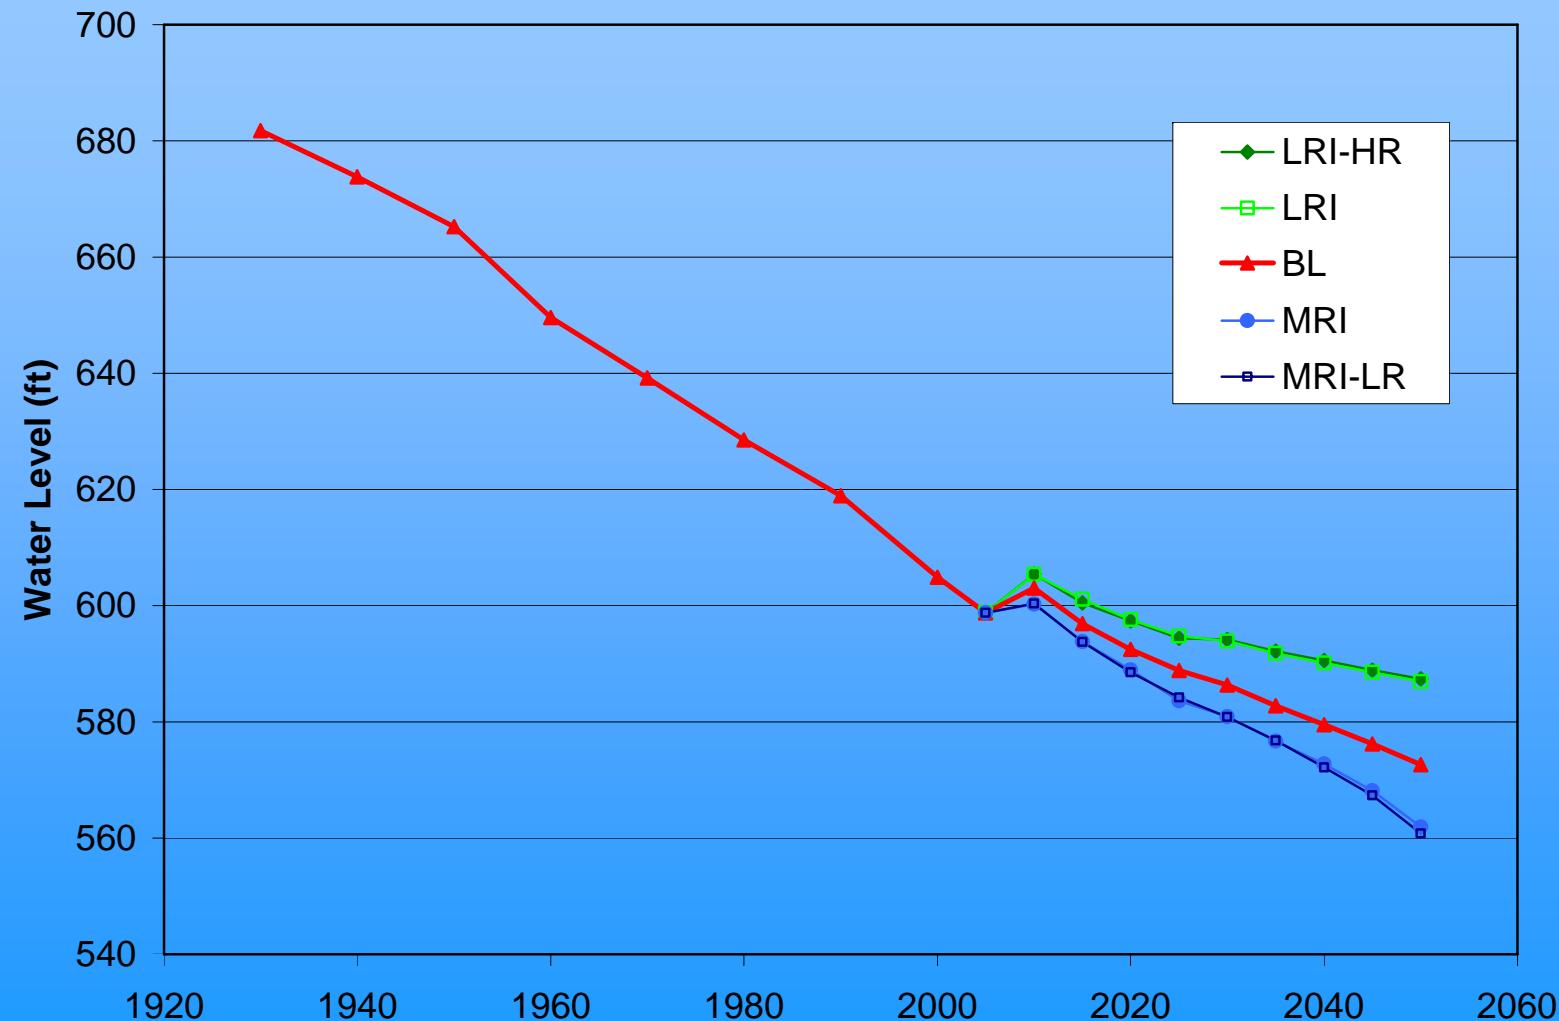

Source: Wilson et al., 1998, ISWS/ISGS Coop 19

Historical Drawdown: 1930 (predevelopment) - 2005

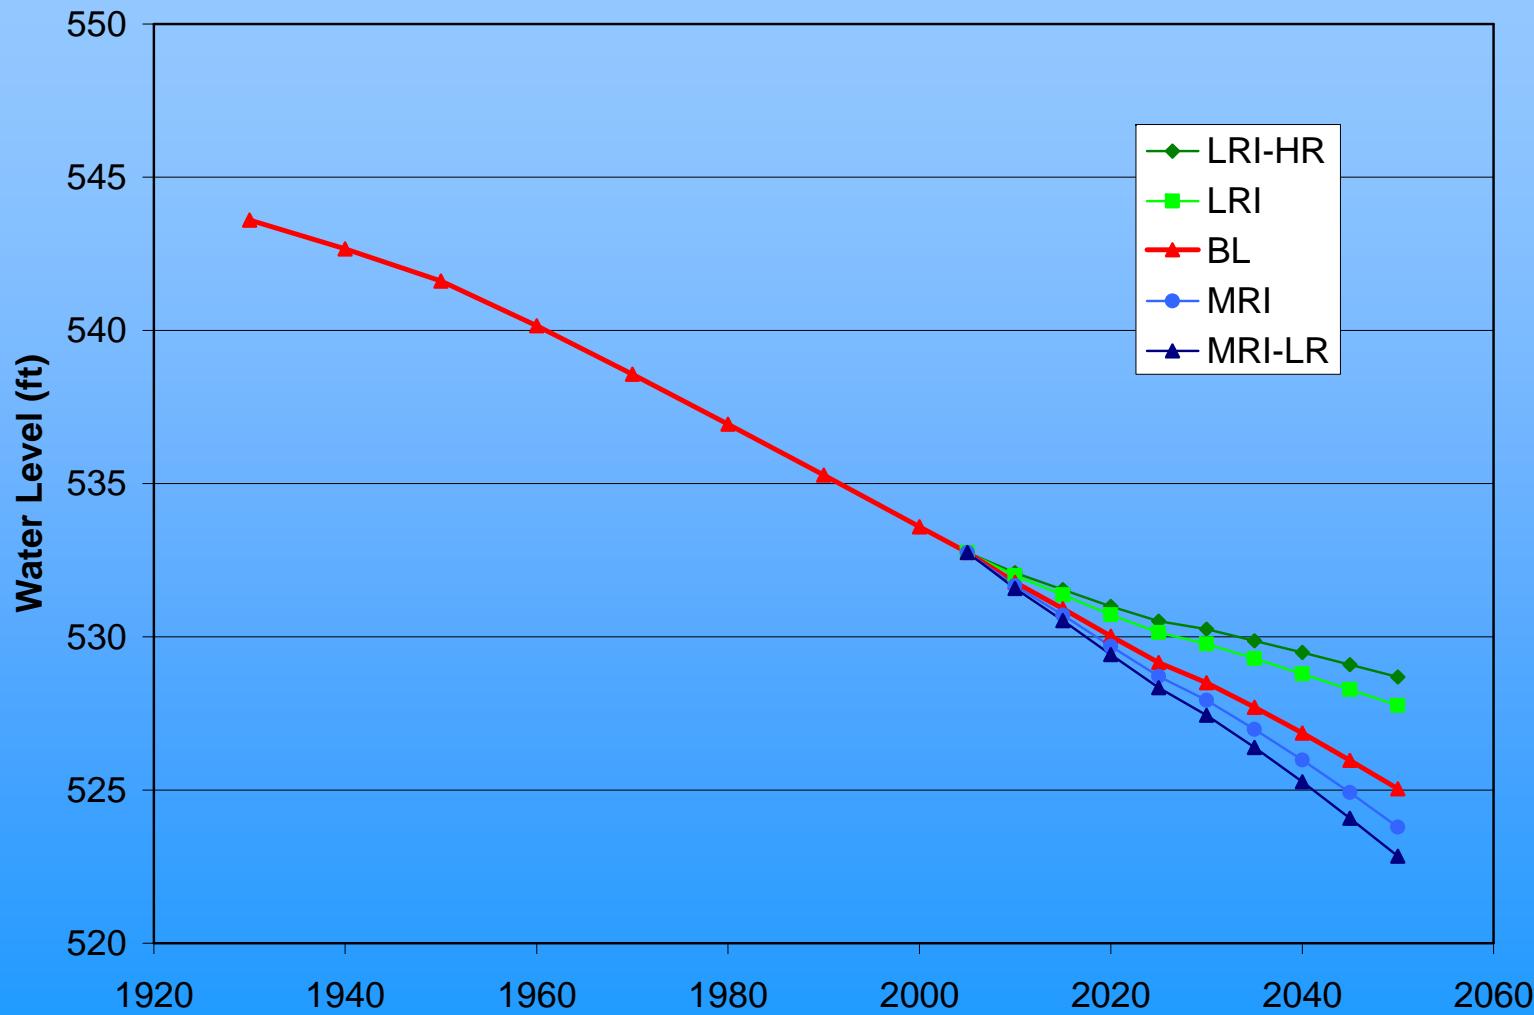

Simulated Hydrograph at Champaign (Petro-North Ob-Well)

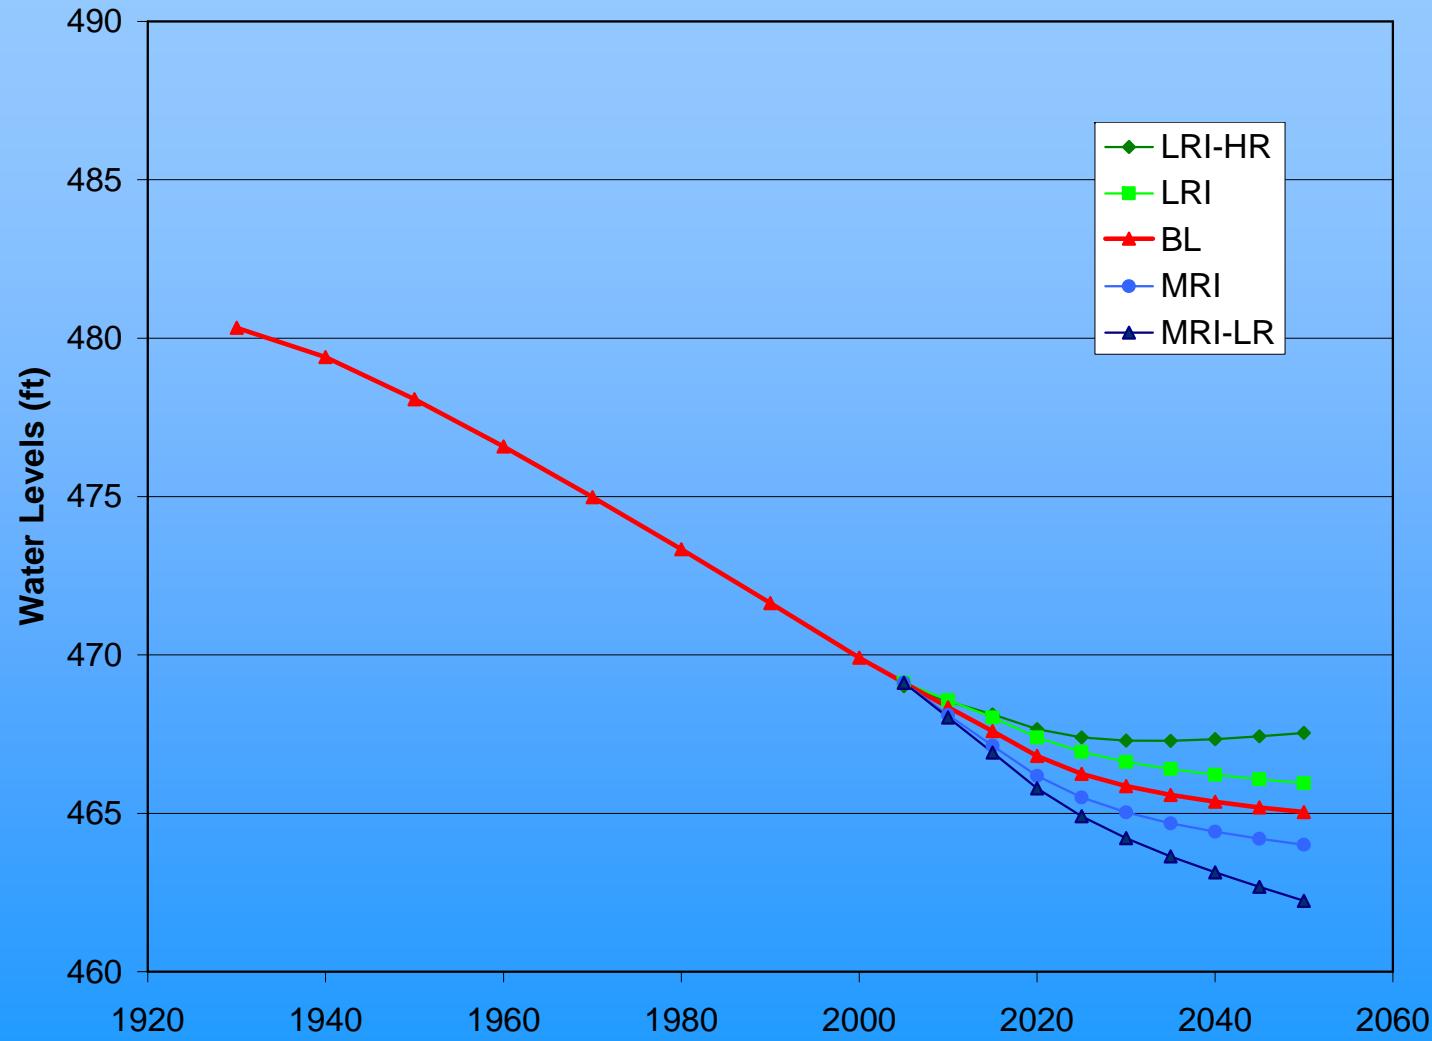

Confined aquifer - insignificant differences between high and low recharge

Simulated Hydrograph in Tazewell County (MTH-3 Ob-Well)

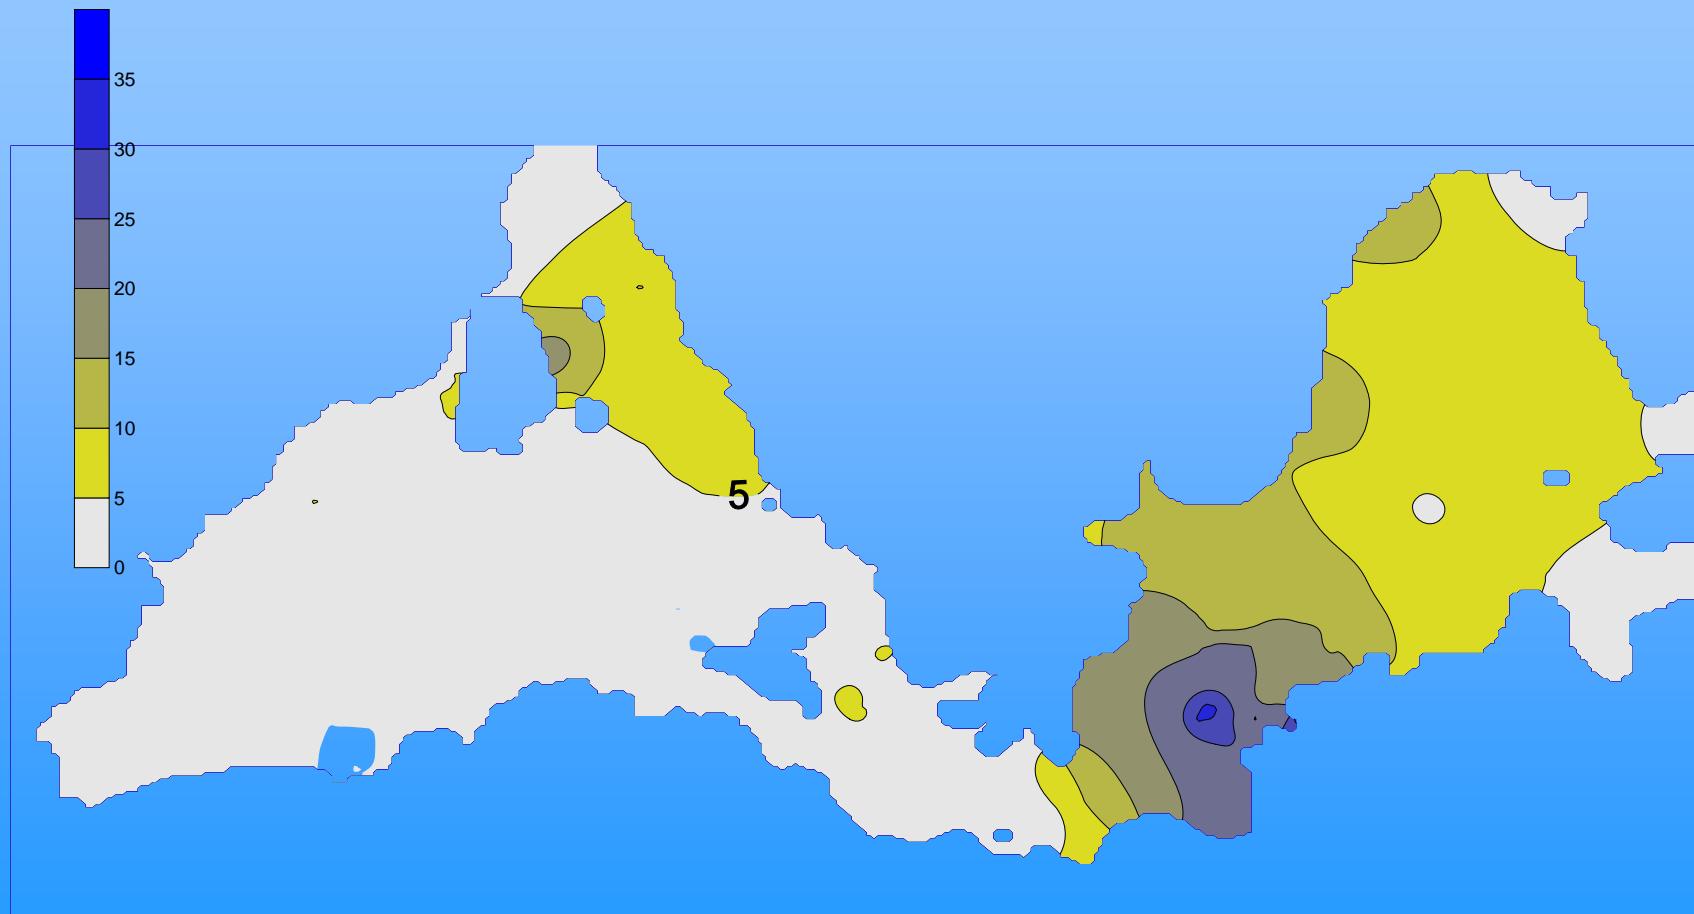

Unconfined aquifer – more significant differences between high and low recharge

Simulated Hydrograph in Mason County (MTOW-13 Ob-Well)

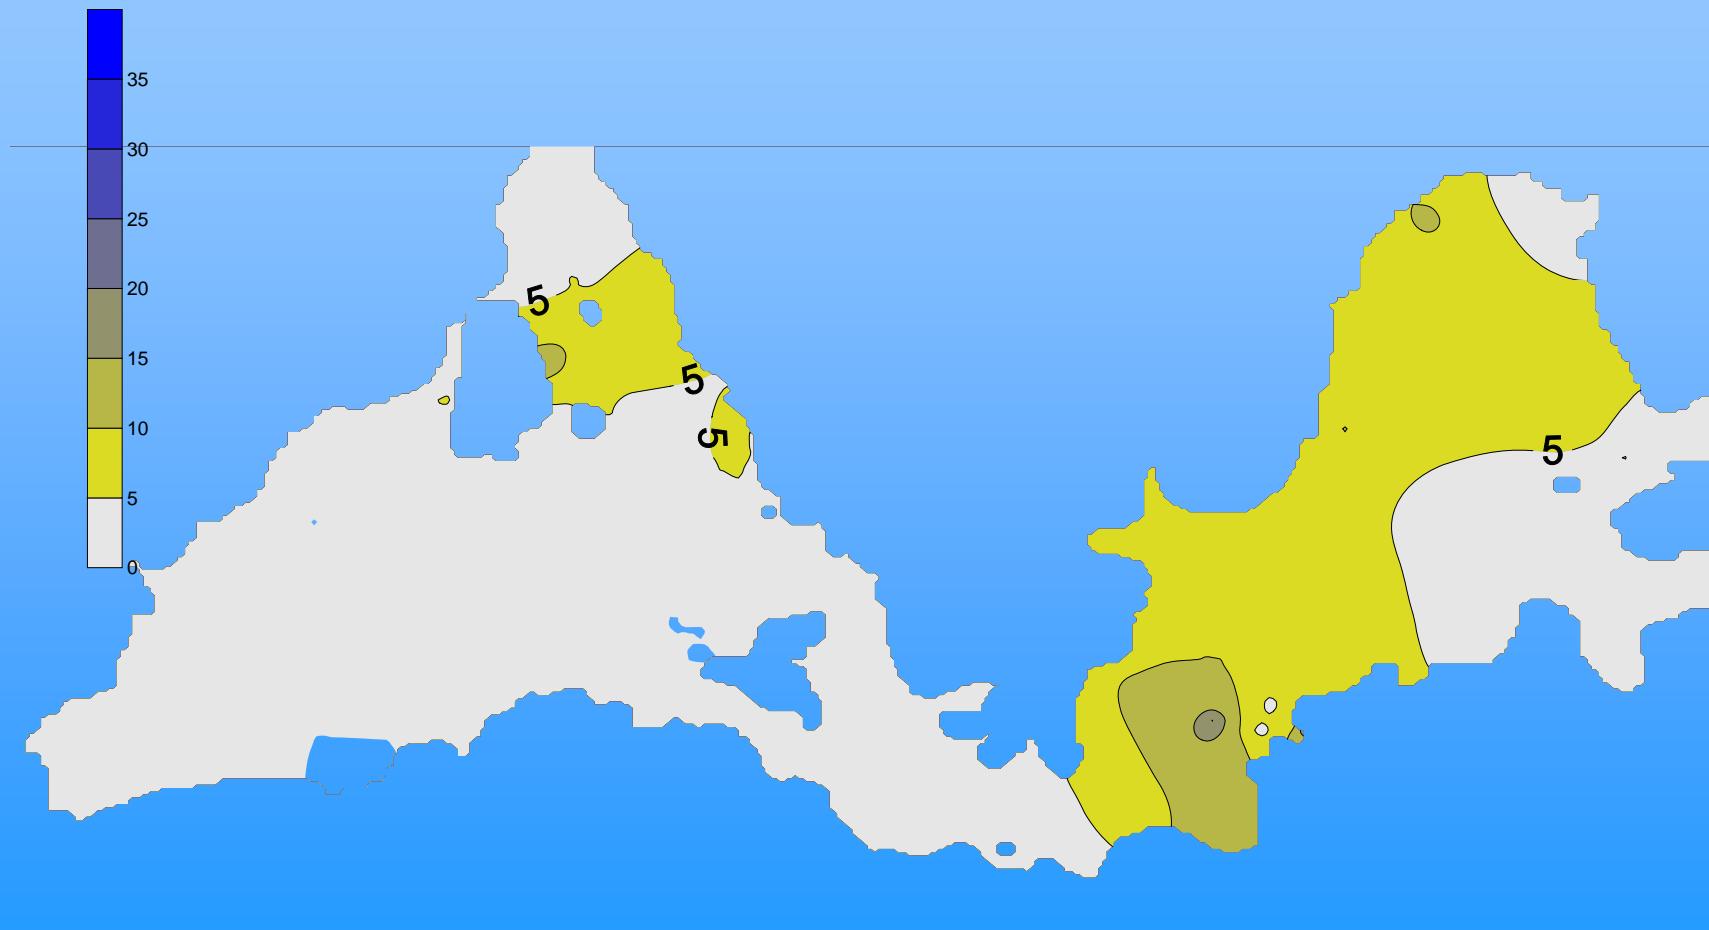

Unconfined aquifer – more significant differences between high and low recharge

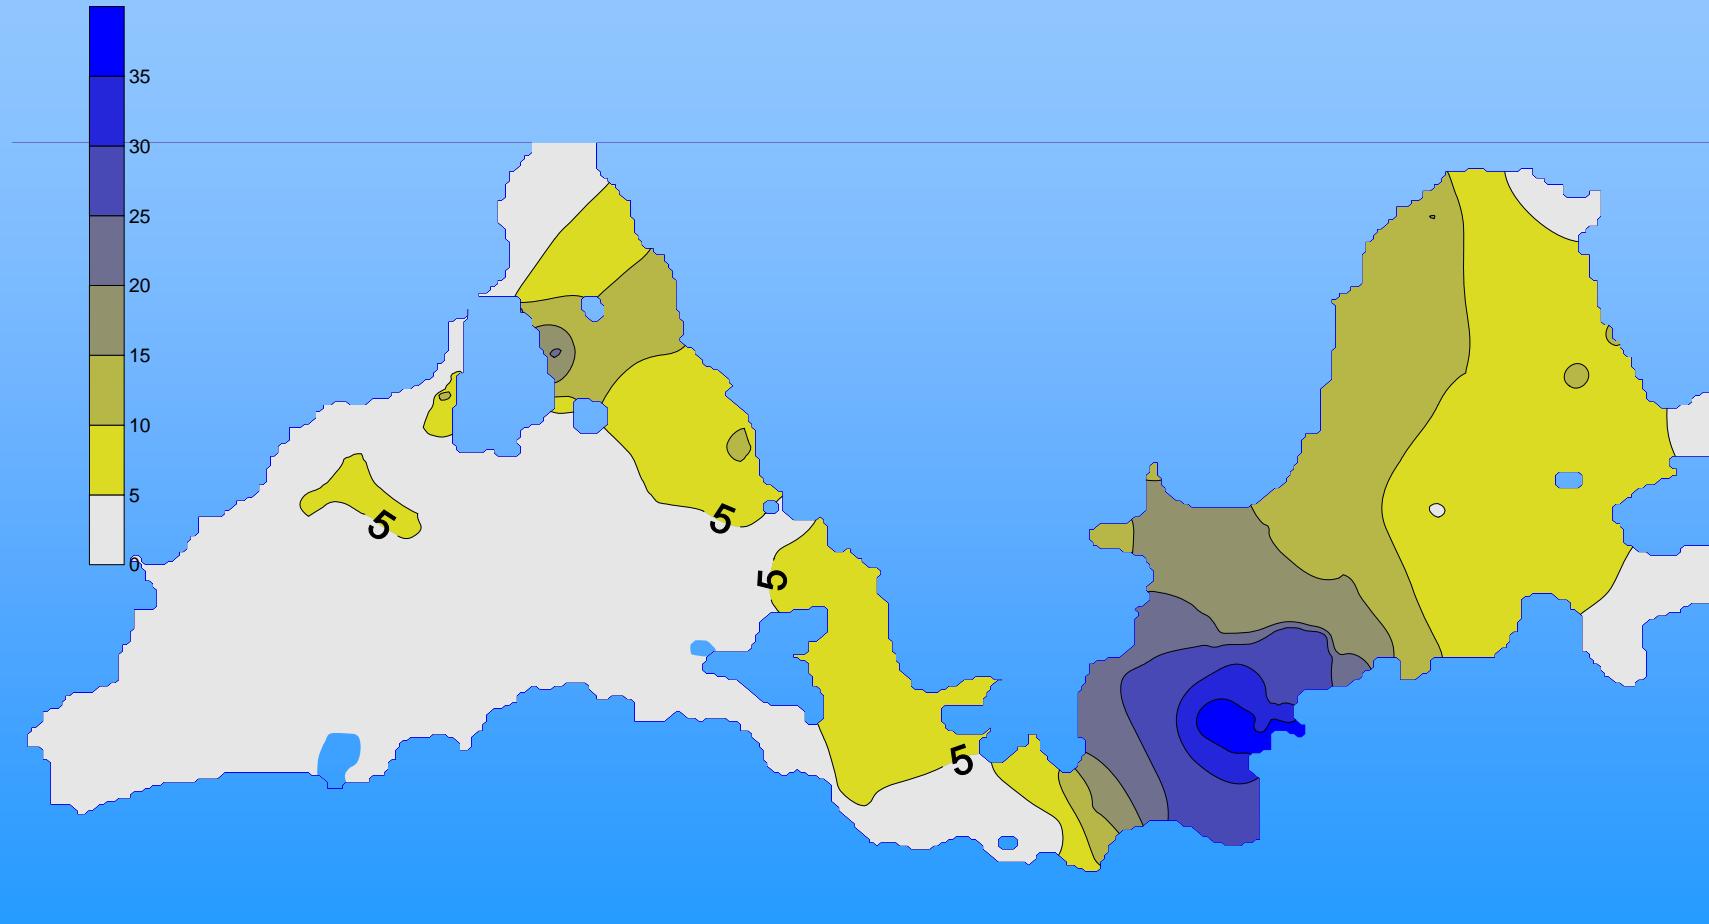

Drawdown: 2005 – 2050 Baseline Scenario

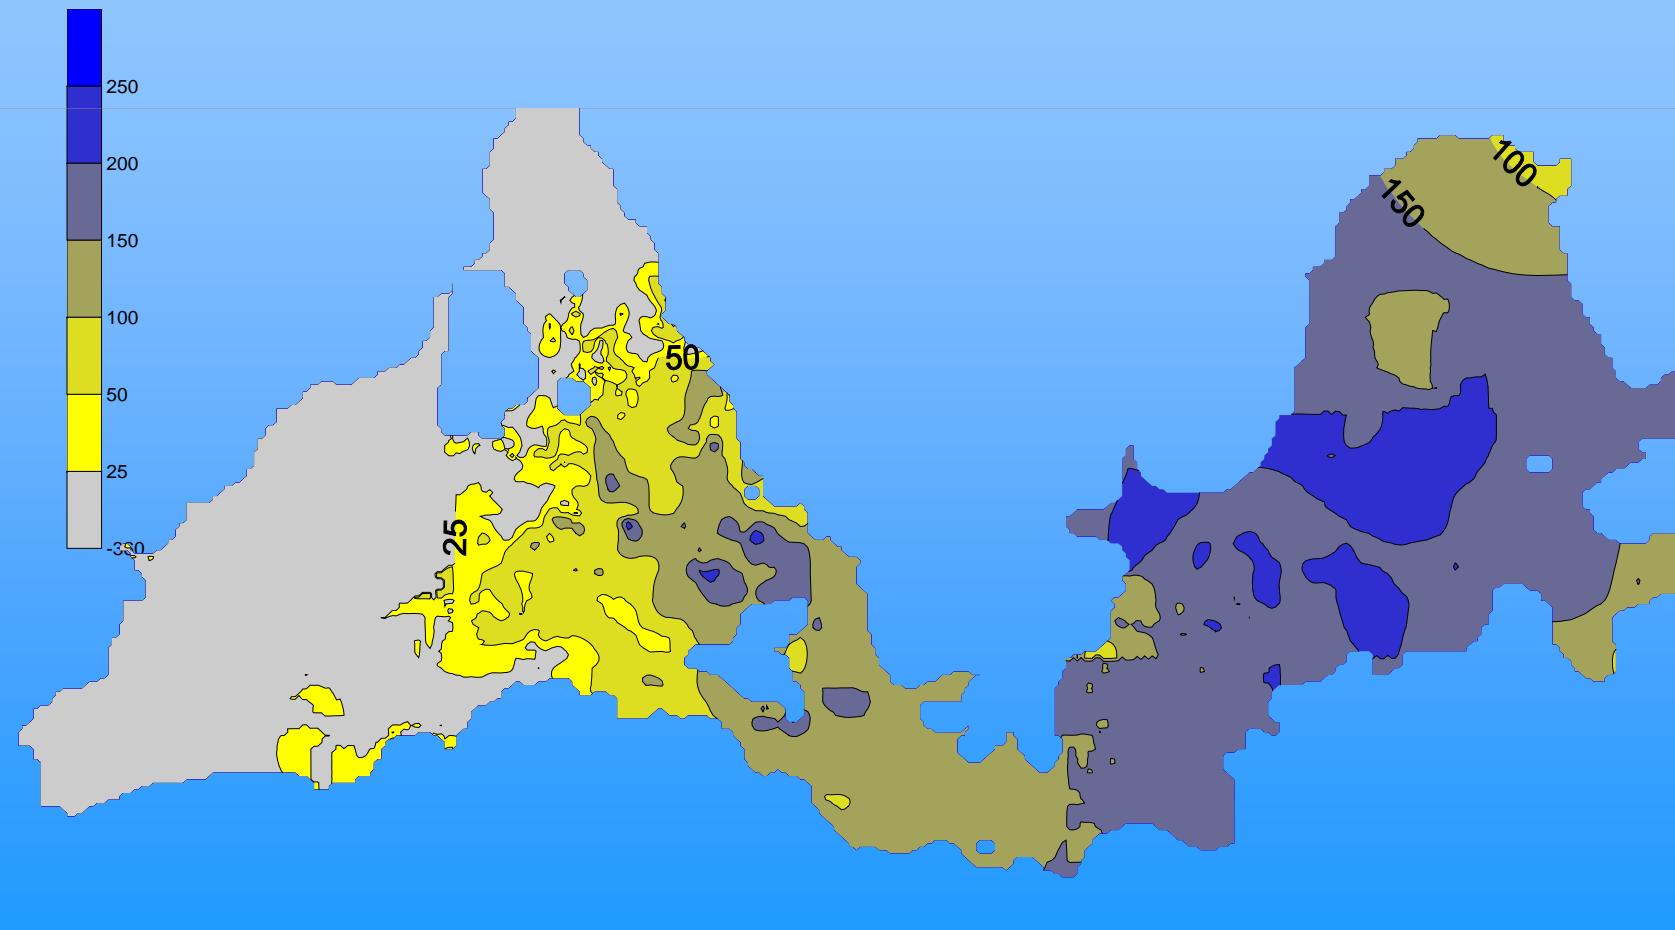

Drawdown: 2005 – 2050 LRI Scenario

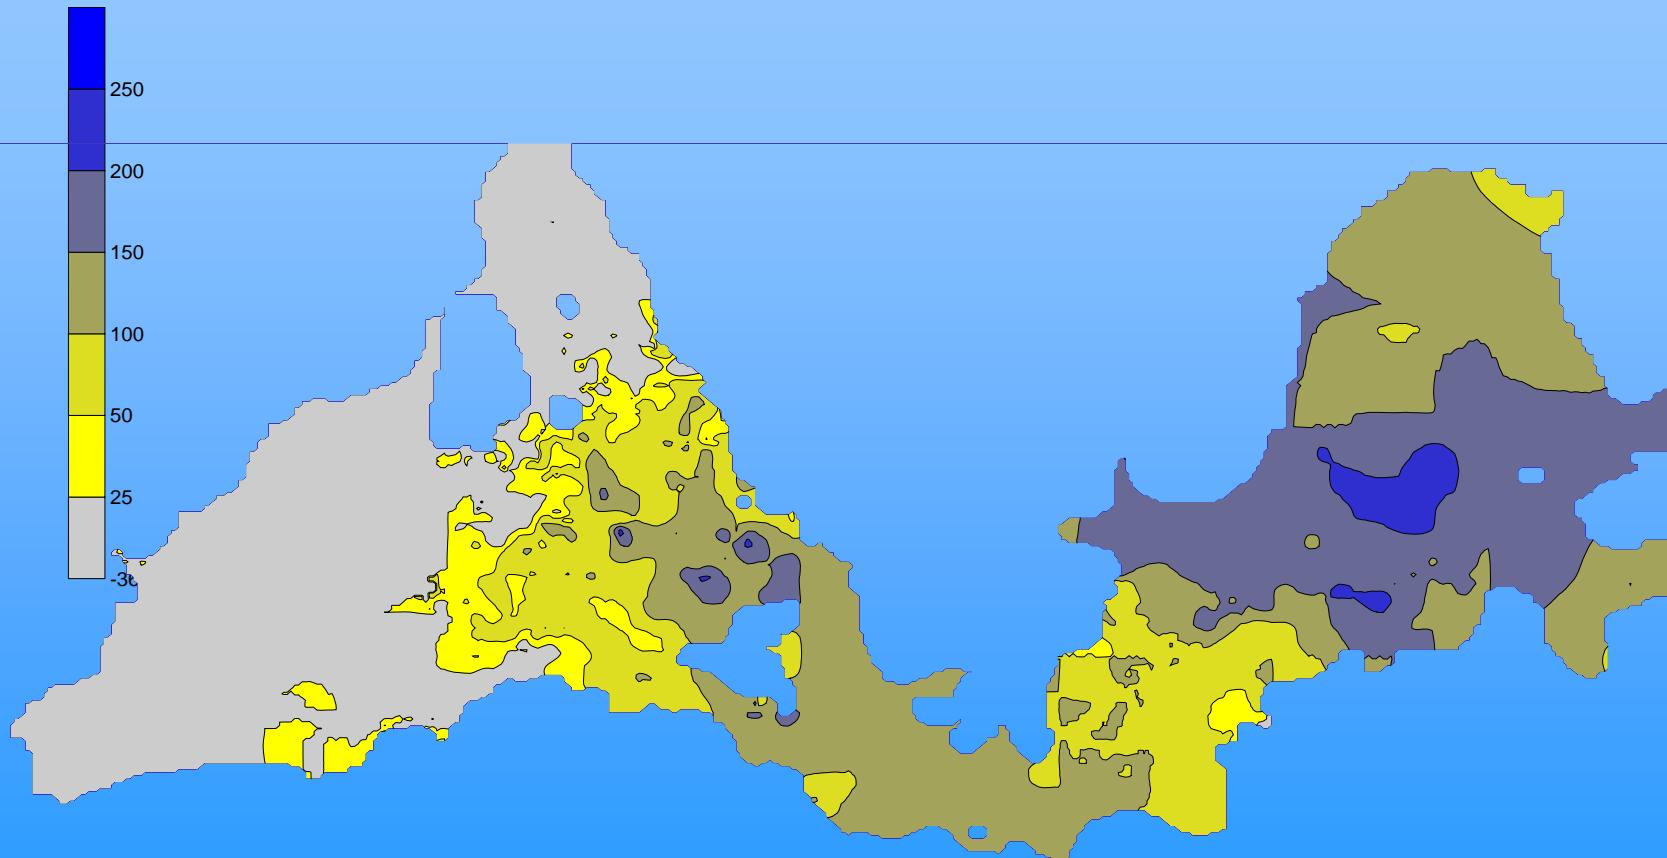

Drawdown: 2005 – 2050 MRI Scenario

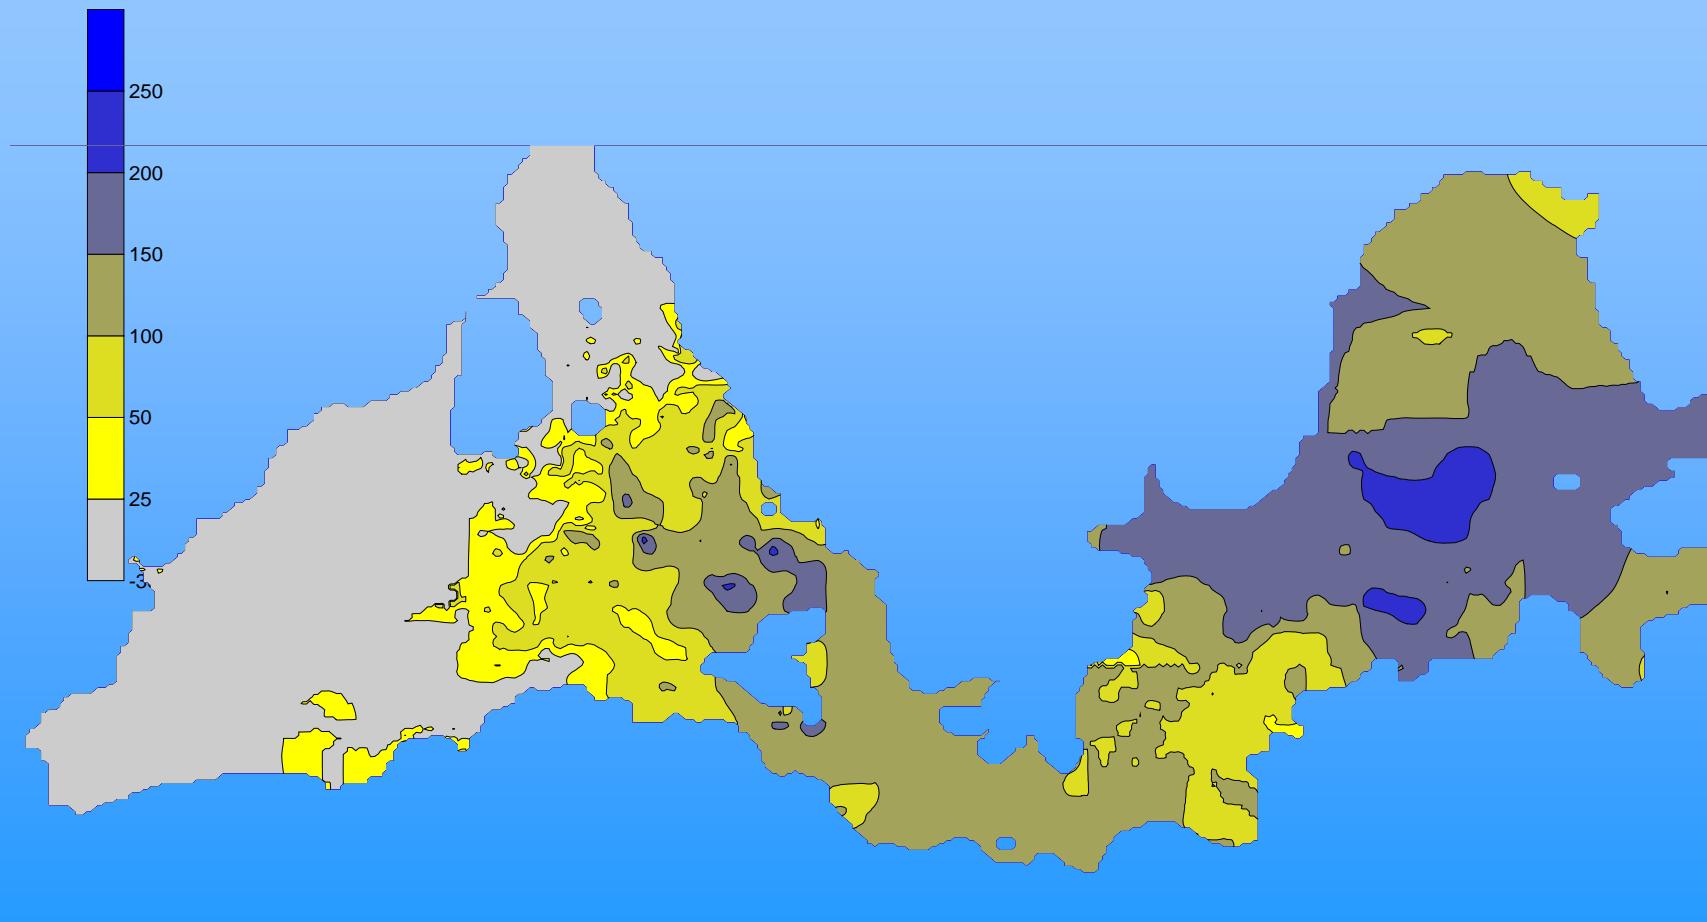

Available Head: Predevelopment Condition

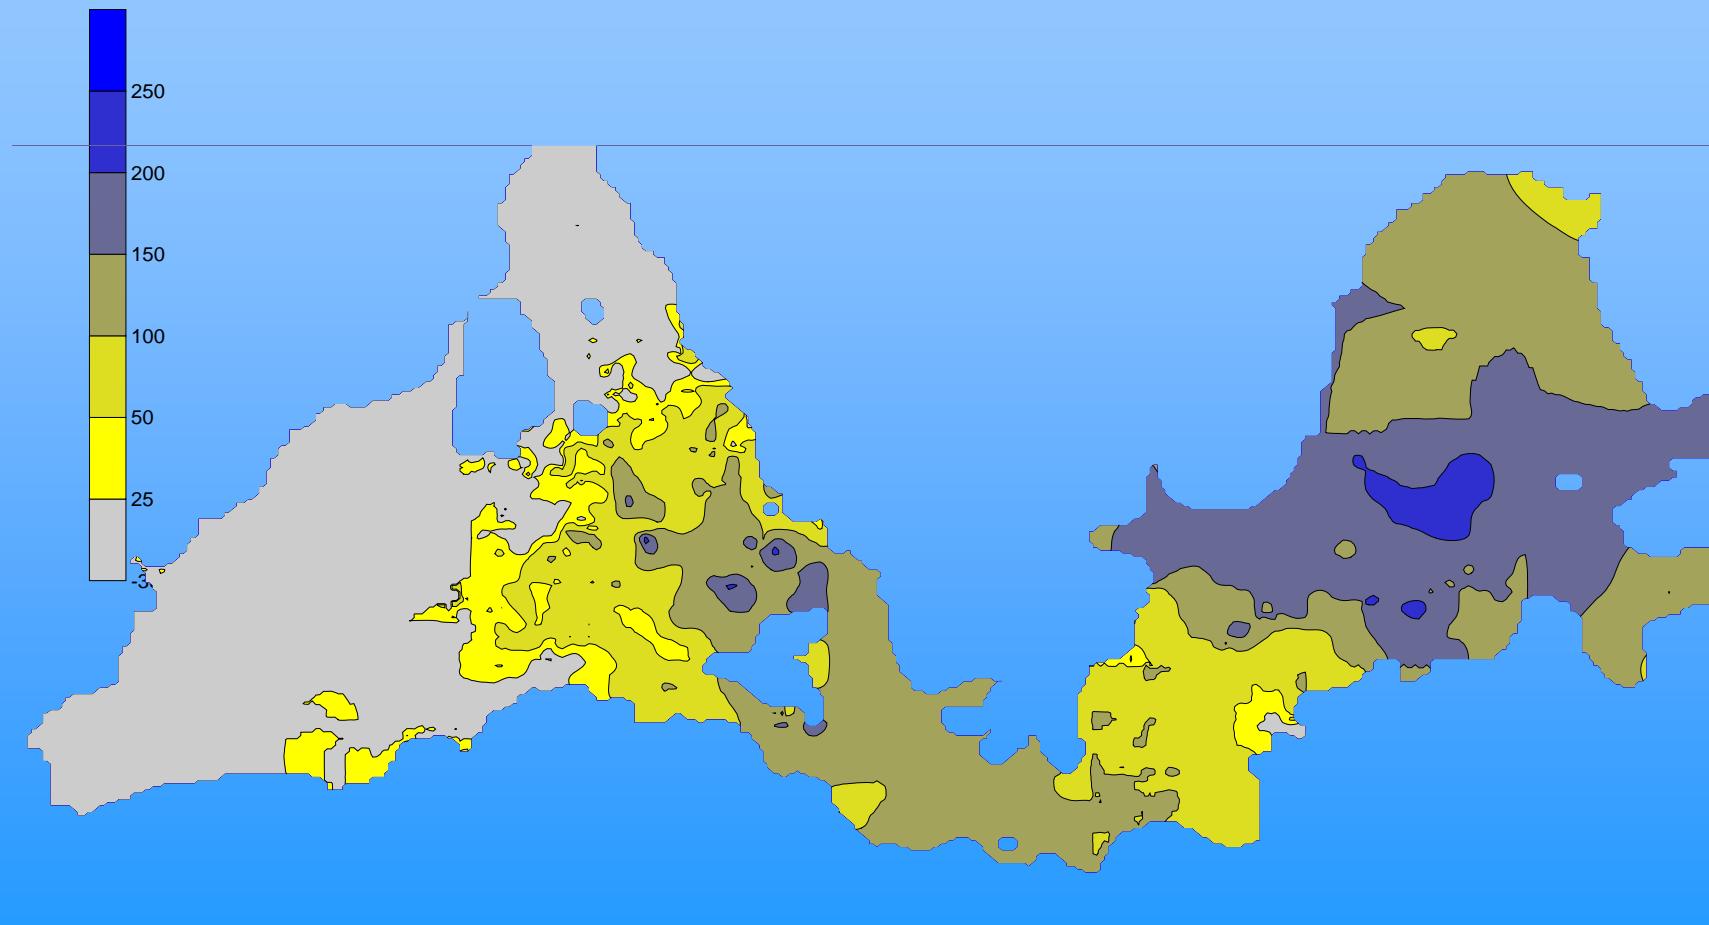

Available Head: 2050 Baseline Scenario

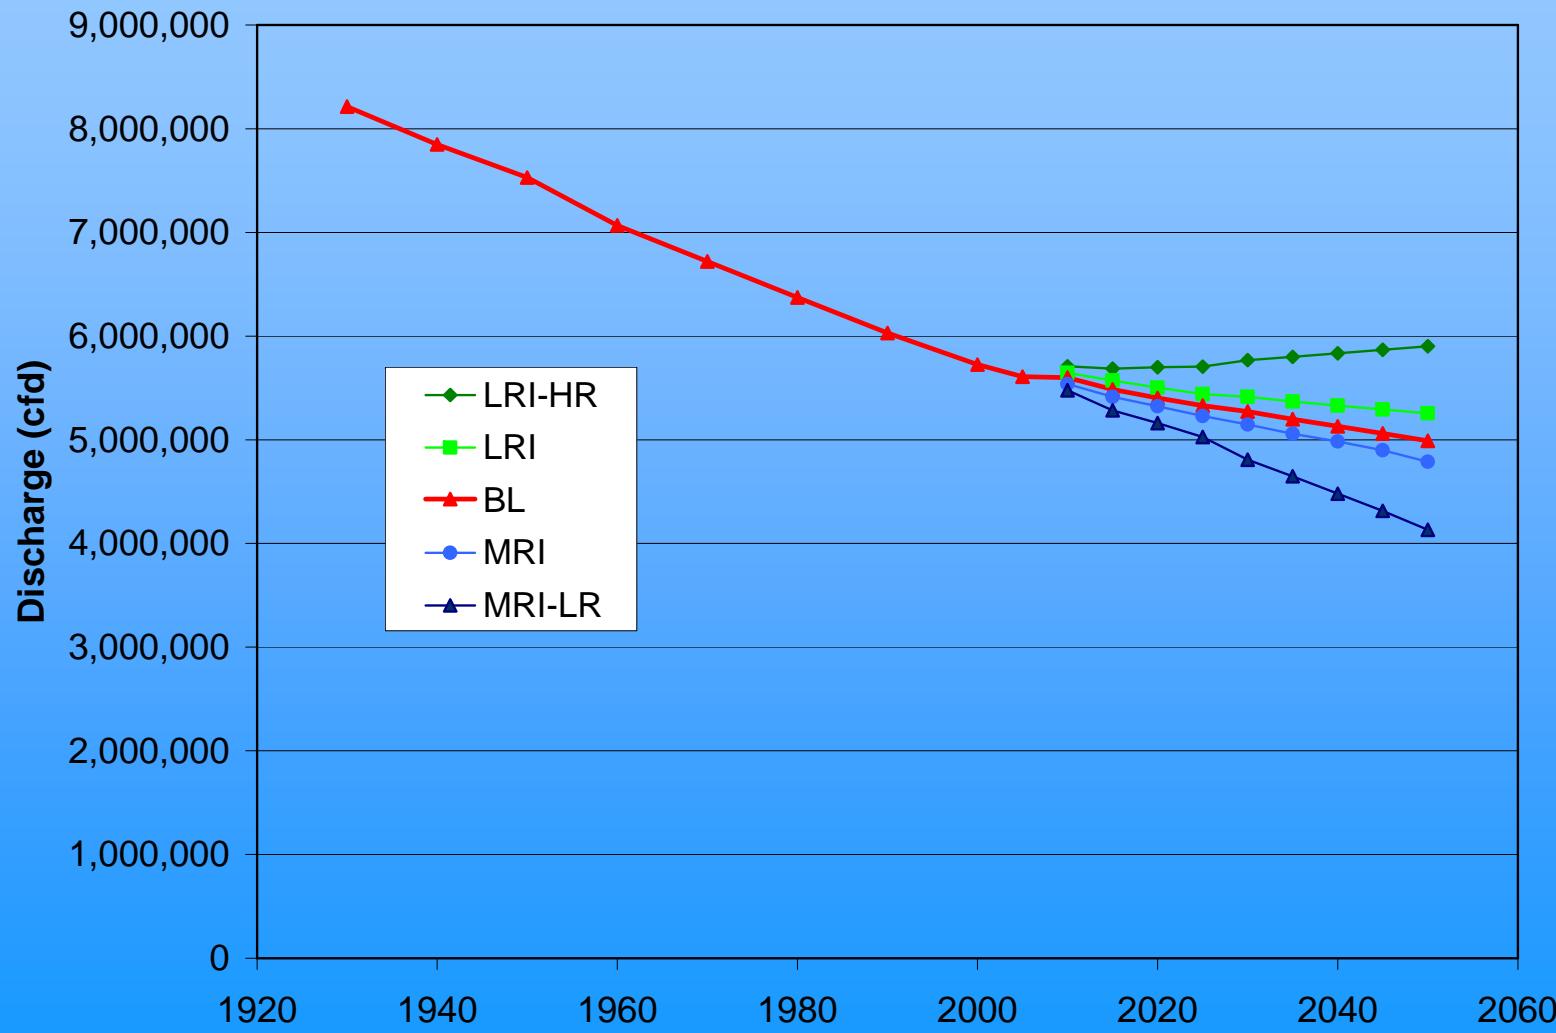

Available Head: 2050 LRI Scenario

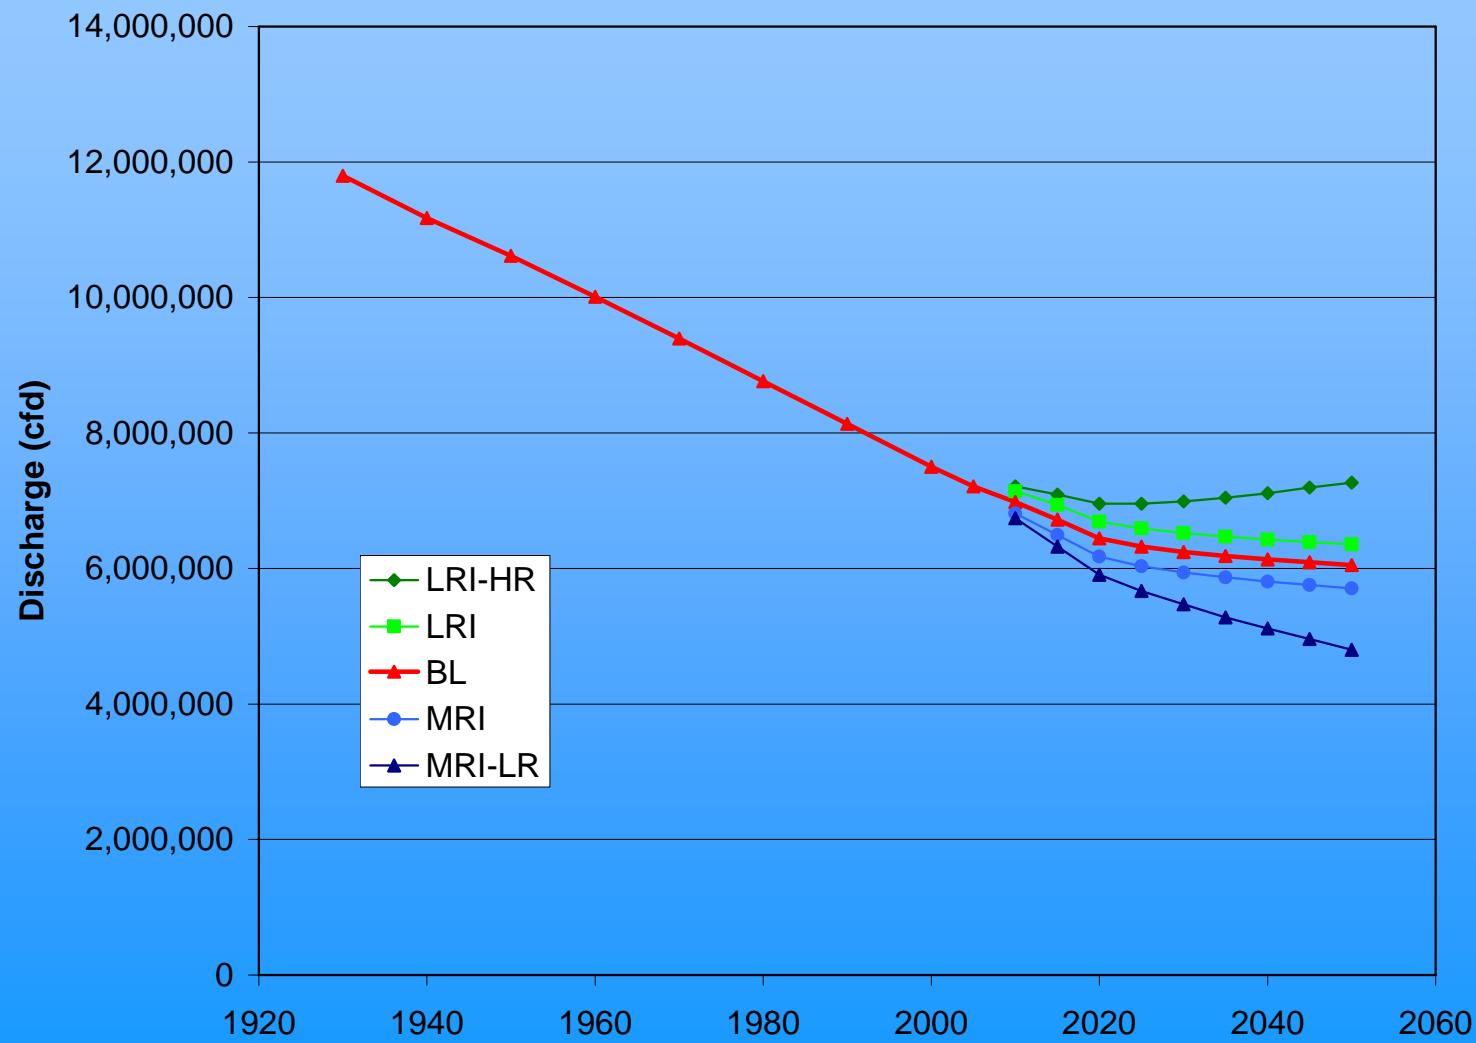

Available Head: 2050 MRI Scenario

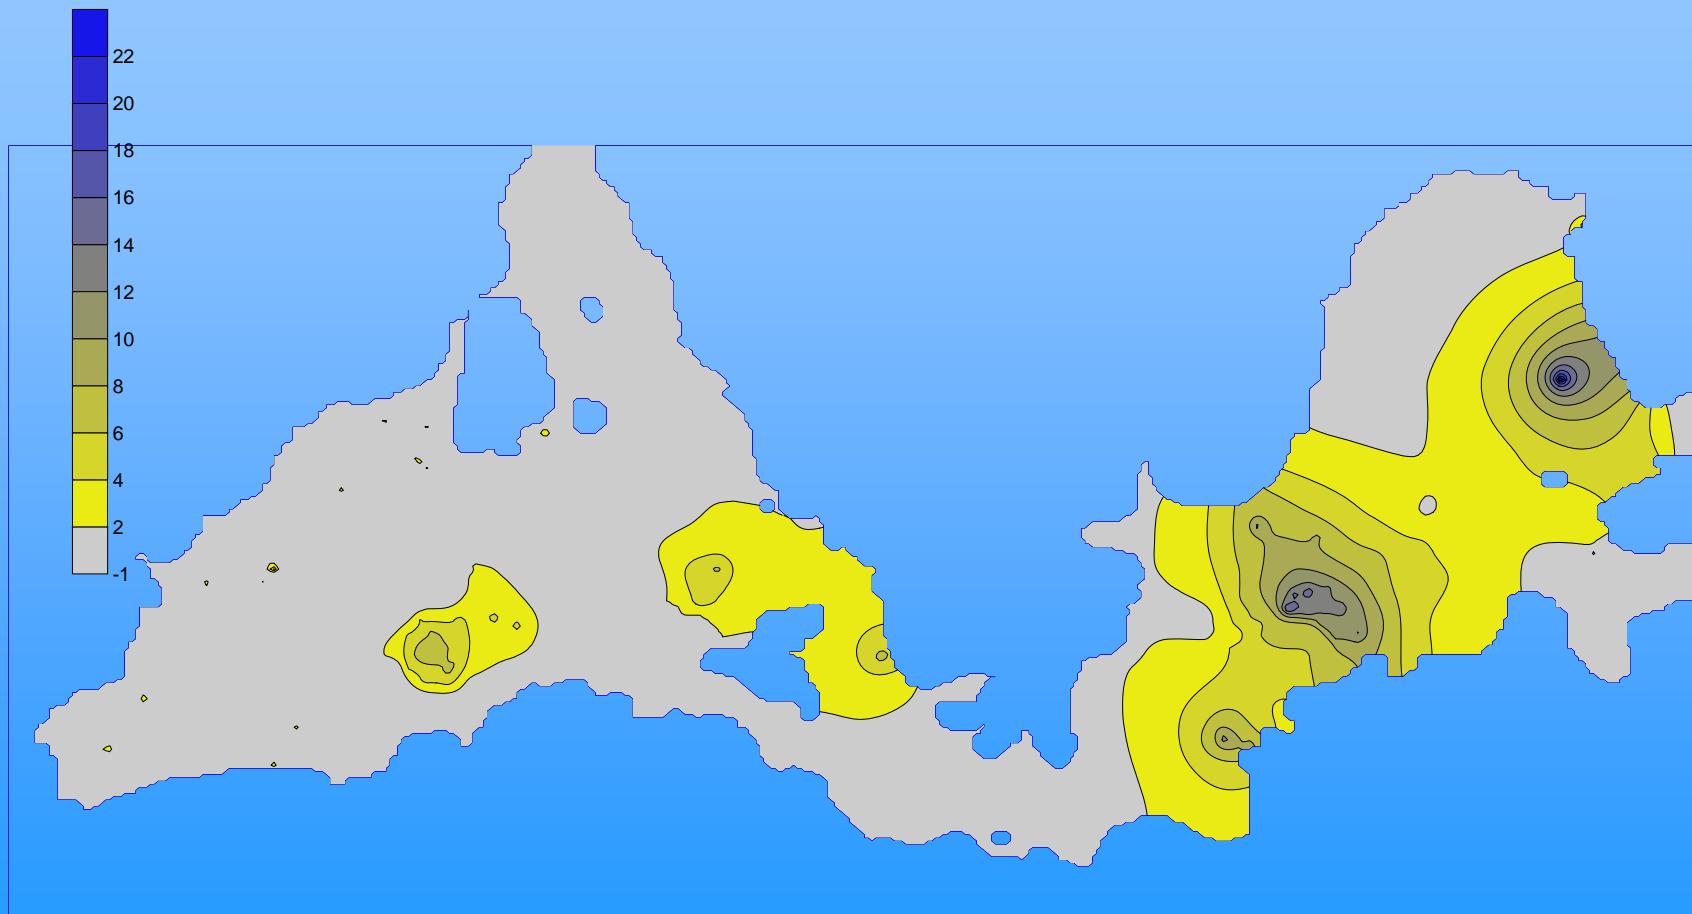

Simulated Groundwater Discharge to Upper Sangamon Watershed

Simulated Groundwater Discharge to Quiver Creek Watershed

Seasonal Drawdown from Irrigation (and Industrial Pumpage near Champaign)

Think Spring!
